Kepwam Black

Instruction Manual: Spill-Resistant Sliding Lid

For Kepwam Self-Heating Coffee Mugs (Models T1, T2, T2 Plus)

INTRODUCTION

Thank you for choosing the Kepwam Spill-Resistant Sliding Lid. This lid is specifically designed to enhance your experience with Kepwam self-heating coffee mugs, providing improved spill resistance and heat retention. Crafted from high-quality, BPA-free materials, it ensures durability and ease of cleaning. Please read this manual carefully to ensure proper use and maintenance of your new lid.

SETUP AND COMPATIBILITY

Before first use, it is recommended to wash the lid thoroughly. This lid is designed for seamless compatibility with Kepwam self-heating coffee mug models T1, T2, and T2 Plus. Ensure your mug is one of these models for optimal fit and performance.

1. **Unpack:** Carefully remove the lid from its packaging.
2. **Initial Cleaning:** Wash the lid with warm, soapy water and rinse thoroughly. Allow it to air dry completely before first use.
3. **Attachment:** Align the lid with the top of your Kepwam mug and gently press down until it forms a snug seal. Ensure the lid is seated evenly to prevent leaks.

Wide Compatibility

Image: Visual representation of the lid's wide compatibility with various Kepwam self-heating mug sizes, including 14oz and 16oz models, demonstrating a perfect fit.

OPERATING INSTRUCTIONS

The Kepwam sliding lid is designed for ease of use and enhanced beverage enjoyment.

- **Opening the Drinking Spout:** To drink, simply slide the top cover of the lid towards the back of the mug using your thumb. The smooth mechanism allows for easy one-handed operation.
- **Closing the Drinking Spout:** To close and prevent spills, slide the top cover forward until it clicks securely into place, covering the drinking hole.
- **Spill Resistance:** When fully closed, the lid provides excellent spill resistance, making it ideal for travel or use in dynamic environments. While highly resistant, it is not entirely leak-proof if inverted or subjected to extreme shaking.
- **Heat Retention:** The snug seal created by the lid significantly helps in retaining the heat of your beverage, ensuring your drink stays warm longer.

Image: A collage of individuals using Kepwam mugs with the sliding lid in different scenarios, such as working, relaxing, and commuting, highlighting the lid's convenience and portability.

MAINTENANCE AND CLEANING

Regular cleaning will ensure the longevity and hygiene of your Kepwam sliding lid. The lid is made from food-grade, BPA-free plastic for your safety.

- **Daily Cleaning:** After each use, rinse the lid under warm running water. For best results, use a mild dish soap and a soft sponge or brush to clean all surfaces, especially around the sliding mechanism and sealing ring.
- **Deep Cleaning:** Periodically, you may wish to remove the sliding part for a more thorough cleaning. Gently slide the mechanism fully open, then carefully lift it from its track. Clean all components separately.
- **Drying:** Allow all parts to air dry completely before reassembling or storing to prevent mold or mildew buildup.
- **Dishwasher Safety:** While the lid is durable, hand washing is recommended to preserve the integrity of the sealing components and extend its lifespan.

BAP-Free

Made of high quality plastic without BPA safe and non-toxic. Impact resistant shatterproof, sturdy and lasts a long time

High-Quality Plastic

Safe and Non-Toxic

Strong and Durable

TROUBLESHOOTING

If you encounter any issues with your Kepwam sliding lid, please refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Lid leaks when closed.	Lid not fully closed, debris on sealing ring, or lid not seated properly on mug.	Ensure the sliding mechanism is fully closed. Remove the lid and check the sealing ring for any food particles or residue. Re-seat the lid firmly and evenly on the mug.
Sliding mechanism is stiff or difficult to move.	Buildup of dried beverage residue or lack of lubrication.	Thoroughly clean the lid, paying close attention to the sliding tracks. Ensure no residue is impeding movement. If necessary, remove the sliding part for a deeper clean.
Lid does not fit mug.	Incorrect mug model or lid not aligned correctly.	Verify that your mug is a Kepwam T1, T2, or T2 Plus model. Ensure the lid is aligned correctly with the mug's rim before pressing down. Do not force the lid.
