7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Tracking Loss During Scan	Rapid movement, insufficient features on object, poor lighting.	Scan more slowly and smoothly. Ensure adequate lighting. For featureless objects, use marker mode. The anti-shake technology helps stabilize tracking.
Difficulty Scanning Black/Metal Objects	Highly reflective or light-absorbing surfaces.	The Otter Lite is designed to scan these without spray. Ensure consistent lighting and try adjusting exposure settings in the software.
Scanner Not Connecting to Software	WiFi connectivity issues, outdated software, driver problems.	Verify both scanner and device are on the same WiFi network. Restart both devices. Ensure CrealityScan 4.0 is the latest version. Check device drivers.
Poor Scan Quality/Accuracy	Incorrect scanning distance, object movement, dirty lenses.	Maintain a consistent scanning distance. Ensure the object is stable. Clean the scanner lenses. Calibrate the scanner if necessary (refer to software instructions).
Battery Drains Quickly	Prolonged use, battery degradation.	Ensure the battery is fully charged before use. Reduce continuous scanning time. Consider replacing the battery if it's old and performance has significantly degraded.
