Always ensure the chain is running at full speed before making contact with the material. Apply light pressure and let the

saw do the work.

- **Pruning branches:** Support the branch to prevent it from falling unexpectedly. Cut from the top down for smaller branches, or use a two-cut method for larger ones to prevent tearing.
- **Cutting logs:** Secure the log to prevent rolling. Cut through the log in a controlled manner.
- **Maximum cutting diameter:** The 4-inch blade is ideal for branches up to approximately 10-11 cm (4 inches) in diameter. For larger diameters, use caution and multiple passes if necessary, or consider a larger tool.
