## 3. INSTALLATION GUIDE

---

### 3.1. Pre-Installation Checklist

- Ensure your PC case has adequate space for a 360mm radiator.
- Identify your CPU socket type (e.g., Intel LGA1700/1200/115X, AMD AM5/AM4) and select the corresponding mounting hardware.
- Gather necessary tools: Phillips head screwdriver, cleaning cloth, isopropyl alcohol (for CPU cleaning).
- Power off your computer and disconnect all cables.

### 3.2. CPU Block and Screen Module Installation

1. Prepare your CPU socket by installing the correct backplate and standoffs according to your motherboard's instructions.
2. Apply a small amount of thermal paste to the center of your CPU's integrated heat spreader (IHS).
3. Carefully place the pump/cold plate assembly onto the CPU, aligning the mounting holes.
4. Secure the pump/cold plate with the provided thumb screws, tightening them in a diagonal pattern until snug. Do not overtighten.
5. The display module is rotatable. Adjust its orientation as desired. Ensure the four screws are evenly tightened during installation to prevent screen sagging.

### 3.3. Radiator and Fan Installation

1. Attach the three ROTA SL ARGB 120mm fans to the radiator using the longer fan screws. Ensure the fan airflow direction is correct for your case's cooling strategy (typically pushing air through the radiator).
2. Mount the radiator assembly to your PC case. Common locations include the top or front panel.
3. Connect the ROTA SL ARGB fans. These fans feature contact point transmission and magnetic cables for simplified wiring. Align the contact points between fans and use the magnetic cable to connect the fan chain to your fan controller or motherboard.

# Magnetic Cable

With just one magnetic cable, you can control all fan lighting effects and speeds, making installation and cable management easier than ever.

# Contact Point Transmission

Ensuring more stable power delivery and speed regulation. This design also eliminates visible wiring between fans, maintaining a cleaner PC build.

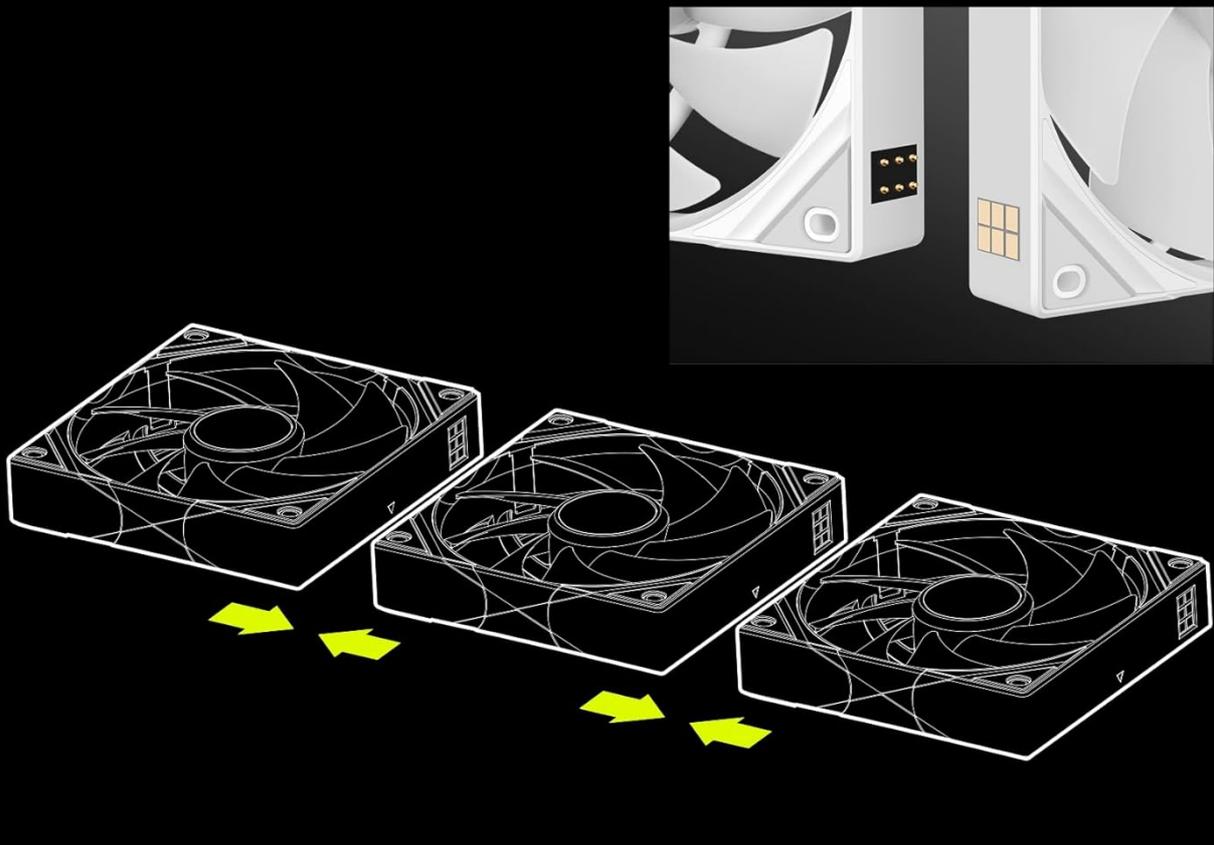

Image 3.4: Contact point transmission ensures stable power and speed regulation between fans, reducing visible wiring.

## 3.4. Cable Connections

- Connect the pump power cable to an available CPU\_FAN or AIO\_PUMP header on your motherboard.
- Connect the ARGB cable from the pump/screen module to a 5V ARGB header on your motherboard or a compatible ARGB controller.
- Connect the USB cable from the pump/screen module to an internal USB 2.0 header on your motherboard. This is required for KANALI software functionality.
- Connect the magnetic fan cable to your fan controller or motherboard fan header.

## 6. TROUBLESHOOTING

---

### 6.1. Common Issues and Solutions

Issue	Possible Cause	Solution
<b>No Display on Screen</b>	USB cable not connected or loose. KANALI software not installed or running.	Ensure the USB 2.0 cable from the pump is securely connected to the motherboard. Install and run the KANALI software. Check power connections.
<b>Fans/ARGB Not Lighting Up</b>	ARGB cable not connected or loose. Magnetic fan connections not secure. KANALI software not controlling ARGB.	Verify the 5V ARGB cable is connected to the motherboard/controller. Ensure fans are properly connected via magnetic contact points. Check ARGB settings in KANALI software.
<b>High CPU Temperatures</b>	Pump not running. Insufficient thermal paste. Radiator airflow obstructed. Fans not spinning or spinning too slowly.	Check pump power connection and ensure it's running (you might feel slight vibration). Reapply thermal paste if necessary. Clean radiator fins. Check fan connections and speeds in BIOS/KANALI.
<b>Screen Sagging</b>	Unevenly tightened screws on the display module.	Loosen and then evenly tighten the four screws securing the display module.
