MAINTENANCE AND CARE

- Clean the cabinet surfaces with a soft, slightly damp cloth. Avoid using abrasive cleaners, harsh chemicals, or solvents, as these can damage the finish.
- Wipe up any spills immediately to prevent staining or moisture damage to the cabinet's surface.
- Periodically check all screws and connections to ensure they remain tight. Retighten if necessary to maintain structural integrity.
- Avoid placing hot items directly on the cabinet surface. Always use coasters or protective pads to prevent heat marks.
- Keep the cabinet away from direct sunlight and excessive moisture or humidity to prevent warping, fading, or discoloration of the materials.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Cabinet is wobbly or unstable.	Loose connections; uneven floor surface; insufficient support.	Ensure all assembly screws are securely tightened. Place the cabinet on a level surface. If applicable, adjust the leveling feet on the bottom of the legs. Consider anchoring the cabinet to a wall for added stability.
Doors do not align properly or have gaps.	Hinges not adjusted correctly; cabinet not level; panels not assembled squarely.	Refer to your assembly guide for specific hinge adjustment instructions. Ensure the cabinet itself is on a level surface. Recheck that all main panels are assembled squarely.
Door does not open or close smoothly with the push-latch.	Push-latch mechanism misaligned, obstructed, or not fully engaged.	Check for any physical obstructions around the latch. Ensure the push-latch mechanism is securely installed and correctly aligned with the door's closing point.
