# MAINTENANCE

---

## Cleaning the Monitor

To clean the monitor screen, gently wipe it with a soft, lint-free cloth. For stubborn marks, dampen the cloth slightly with water or a non-abrasive screen cleaner. Avoid using harsh chemicals, alcohol, or ammonia-based cleaners, as these can damage the screen surface. Ensure the monitor is powered off and unplugged before cleaning.

To clean the monitor casing, use a soft, dry cloth. Do not spray cleaning liquids directly onto the monitor.

## TROUBLESHOOTING

---

If you encounter issues with your monitor, refer to the following common troubleshooting steps:

- **No Signal / Black Screen:**
  - Ensure all cables (USB-C, Mini HDMI) are securely connected to both the monitor and the source device.
  - Verify that the source device is powered on and outputting a signal.
  - If using HDMI, confirm the monitor is receiving external power.
  - Try connecting the monitor to a different device or using different cables to rule out cable or source issues.
- **No Power:**
  - Check if the power adapter is properly connected to a working power outlet and the monitor.
  - If powering via USB-C, ensure the source device's USB-C port supports power delivery and is providing sufficient power.
  - Press the power button on the monitor to ensure it is turned on.
- **Poor Display Quality:**
  - Adjust the display settings via the OSD menu. Consider changing the screen setting to 'Movie' mode for improved display quality.
  - Ensure the display resolution on your source device is set to 1920x1080 (FHD).
  - Check for any physical damage to the screen or cables.
- **No Audio:**
  - Verify that the volume on both the monitor and the source device is not muted and is turned up.
  - Ensure the correct audio output device is selected in your source device's sound settings.
  - If using external headphones/speakers, ensure they are properly connected to the 3.5mm audio jack.
