SAFETY INSTRUCTIONS

- Always handle cymbals by their edges to avoid fingerprints and smudges, which can affect sound quality and appearance.
- Ensure cymbals are securely mounted on stands to prevent accidental falls during play, which could cause injury or damage to the cymbals.
- Use appropriate drumsticks. Overly heavy or sharp-tipped sticks can cause premature wear or damage to the cymbals.
- When playing, maintain a safe distance from others to prevent accidental injury from drumsticks or cymbal movement.
- Prolonged exposure to loud sounds can cause hearing damage. Consider using hearing protection during extended practice or performances.

SETUP INSTRUCTIONS

1. **Unpack Components:** Carefully remove all cymbals, drumsticks, mute pads, and the storage bag from their packaging. Inspect for any signs of damage.
2. **Prepare Cymbal Stands:** Ensure your drum kit's cymbal stands are stable and properly adjusted for height and angle.
3. **Mount Hi-Hats:** Place the two 14-inch Hi-Hat cymbals onto the hi-hat stand. The bottom cymbal should rest on the stand's clutch, and the top cymbal should be attached to the pull rod. Adjust the

clutch to control the gap between the cymbals for desired sound.

4. **Mount Crash Cymbal:** Place the 16-inch Crash cymbal onto a dedicated crash cymbal stand. Ensure it is secured with felts and a wingnut, allowing it to vibrate freely.
5. **Mount Ride Cymbal:** Place the 20-inch Ride cymbal onto a dedicated ride cymbal stand. Secure it with felts and a wingnut, ensuring it can resonate fully.
6. **Apply Mute Pads (Optional):** For quieter practice sessions, place the included cymbal mute pads directly onto the cymbals. These pads significantly reduce volume without altering the feel of playing.

OPERATING INSTRUCTIONS

The VEVOR 3-Piece Alloy Cymbal Pack is designed to provide clear and versatile sounds for various musical genres. Understanding how to properly strike and utilize each cymbal will enhance your playing experience.

Playing Techniques

- **Hi-Hats (14-inch):** Use for rhythmic patterns. Play with the tip of the stick on the top surface for a crisp sound, or strike the edge for a louder, open sound. The foot pedal controls the opening and closing, allowing for various choked or sustained sounds.
- **Crash Cymbal (16-inch):** Primarily used for accents and dynamic punctuation. Strike the edge with a glancing blow for a full, explosive sound. Allow it to ring out naturally.
- **Ride Cymbal (20-inch):** Used for sustained rhythmic patterns and accents. Play on the bow (main surface) for a clear, defined 'ping' sound. The bell (center dome) produces a brighter, more cutting tone for accents.

Sound Characteristics

These cymbals are crafted from premium alloy with grooves and hammer patterns to deliver bright, crisp tones. The polished finish contributes to a smooth performance by minimizing harsh overtones. The 1mm thickness ensures a quick response and clear articulation.

MAINTENANCE

Proper care and maintenance will extend the life and preserve the sound quality of your VEVOR cymbals.

- **Cleaning:** After each use, wipe down cymbals with a soft, dry cloth to remove fingerprints, dust, and stick marks. For deeper cleaning, use a specialized cymbal cleaner sparingly, following the product instructions. Avoid abrasive cleaners or harsh chemicals, as these can damage the finish.
- **Storage:** When not in use, store your cymbals in the included storage bag. This protects them from dust, scratches, and environmental factors. The bag is also convenient for transport.
- **Inspection:** Periodically inspect cymbals for any signs of cracks, keyholing around the mounting

hole, or other damage. Address any issues promptly to prevent further deterioration.

- **Handling:** Always handle cymbals by their edges to avoid bending or deforming the metal.

TROUBLESHOOTING

If you encounter any issues with your VEVOR cymbals, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Dull or muted sound	Dirty surface; improper mounting; mute pads still on.	Clean cymbals thoroughly. Ensure felts and wingnuts allow free vibration. Remove mute pads if full volume is desired.
Excessive ringing or unwanted overtones	Cymbal not properly dampened; resonance from other drums/cymbals.	Adjust cymbal felts. Consider using additional dampening rings or tape if needed.
Cymbal wobbles excessively on stand	Loose wingnut or missing felts.	Ensure wingnut is tightened appropriately (not overtightened) and felts are present above and below the cymbal.
Cymbal appears damaged (cracks, bends)	Aggressive playing; improper handling; manufacturing defect.	Review playing technique. Handle cymbals carefully. Contact VEVOR support if damage appears to be a defect.
