INTRODUCTION

Thank you for choosing the Enya Nova Go Carbon Fiber Travel Acoustic Guitar. This manual provides essential information for the proper setup, operation, and maintenance of your instrument. The Nova Go is designed for durability and portability, offering a consistent playing experience in various environments. Please read this manual thoroughly to ensure optimal performance and longevity of your guitar.

SETUP

1. Unboxing and Initial Inspection

Carefully remove your Enya Nova Go guitar and its accessories from the packaging. Inspect the guitar for any visible damage that may have occurred during shipping. The standard package includes:

- Enya Nova Go Carbon Fiber Guitar
- Gig Bag
- Guitar Strap
- Cleaning Cloth
- Spare Strings
- Hex Wrench (for string action adjustment)

2. Tuning Your Guitar

Your guitar may require tuning upon arrival. Use a digital tuner for accuracy. The standard tuning for a 6-string guitar is E-A-D-G-B-e (from thickest to thinnest string).

1. Attach a digital tuner to the headstock of the guitar.
2. Pluck each string individually.
3. Adjust the corresponding tuning peg until the tuner indicates the correct pitch for each string. Turn clockwise to tighten (sharpen) and counter-clockwise to loosen (flatten).

3. Adjusting String Action (Optional)

The Enya Nova Go features a zero-fret design for precise intonation. If you find the string action (height of strings above the fretboard) is not to your preference, minor adjustments can be made. The included hex wrench can be used for bridge adjustments if necessary. For significant adjustments, professional assistance is recommended.

OPERATION

1. Playing Your Nova Go

The Enya Nova Go is a 1/2 size acoustic guitar designed for comfort and portability. Its carbon fiber construction provides a clear and resonant tone. Hold the guitar comfortably, ensuring your fretting hand can easily reach all frets and your strumming/picking hand is positioned over the soundhole area.

2. Carbon Fiber Advantages

The aerospace-grade carbon fiber material makes the Nova Go highly resistant to environmental changes. Unlike traditional wooden guitars, it is moisture-proof and maintains tuning stability across a wide range of temperatures (-20°C to 70°C). This makes it ideal for travel and outdoor use without concerns about warping or cracking.

Image: A close-up shot of the guitar's body, highlighting the carbon fiber material and smooth finish.

3. Portability

Weighing approximately 7.33 lbs and being 1/2 size, the Nova Go is designed for easy transport. The included gig bag provides protection and convenience for carrying your guitar on commutes, hikes, or flights.

Performance Comparison—Carbon Fiber vs. Wooden Guitars

Performance Metric	Enya NOVA GO Carbon Fiber	Traditional Wooden Guitars
Temperature Resistance	No warping from -20°C to 70°C	May warp with 15°C temperature change
Humidity Resistance	100% moisture-proof, unaffected by humidity	Humidity changes cause swelling, shrinking, cracking
Impact Resistance	High-strength carbon fiber, superior shock absorption	Fragile, minor impacts may cause damage
Weight	Just 7.35 lbs, 40% lighter than comparable wooden guitars	12-15 lbs
Maintenance Requirements	Minimal, no special care needed	Requires regular humidity control to prevent damage
Lifespan	20+ years expected lifespan	5-10 years (with careful maintenance)

MAINTENANCE

1. Cleaning

To clean your Enya Nova Go, wipe down the body, neck, and strings with the provided cleaning cloth after each use. For more thorough cleaning, a slightly damp cloth can be used on the carbon fiber body. Avoid abrasive cleaners or solvents.

2. String Replacement

Strings should be replaced periodically, depending on usage, to maintain optimal tone and playability. The Nova Go uses Phosphor Bronze strings. When replacing strings:

- 1. Remove one old string at a time to maintain neck tension.
- 2. Thread the new string through the bridge and tuning peg.
- 3. Wind the string neatly around the tuning peg post, ensuring a few wraps for stability.
- 4. Tune the new string to the correct pitch.

Image: A close-up of the Enya Nova Go's bridge and strings, showing the string attachment points.

3. Storage

While the carbon fiber construction is highly durable, it is recommended to store your guitar in its gig bag when not in use to protect it from dust and accidental impacts. Store it in a location where it won't be subjected to extreme physical stress.

TROUBLESHOOTING

- **Poor Tuning Stability:** Ensure strings are properly seated at the bridge and tuning pegs. New strings may stretch and require frequent re-tuning for the first few days.
- **String Buzz:** Check if the string action is too low. If the hex wrench adjustment does not resolve the issue, consult a guitar technician.

- **Dull Sound:** Old or corroded strings can cause a dull sound. Replace strings regularly.
- **Physical Damage:** Although carbon fiber is robust, severe impacts can cause damage. Inspect the guitar regularly for any signs of wear or damage.

SPECIFICATIONS

Feature	Detail
Model	NOVA GO
Body Material	Carbon Fiber
Neck Material	Carbon Fiber
Fretboard Material	Carbon Fiber
String Material	Phosphor Bronze
Number of Strings	6
Item Weight	7.33 pounds
Package Dimensions	33.85 x 13.9 x 4.69 inches
Color	White
Hand Orientation	Right

WARRANTY AND SUPPORT

For warranty information, technical support, or any inquiries regarding your Enya Nova Go guitar, please contact Enya Music customer service. Details can typically be found on the official Enya Music website or through your purchase documentation.

Always refer to official channels for the most current support information.
