Assembly Steps:

1. **Unpack and Lay Out Components:** Carefully remove all parts from the packaging. Lay out the two main foldable frame sections on a clean, flat surface. Ensure there is enough space for assembly.

2. **Connect Main Frame Sections:** Unfold each main frame section. Align the connecting points of the two main frame sections and slide them together. The design allows for a secure, interlocking fit without the need for screws or tools.
3. **Insert Center Support Bar:** Locate the center support bar. Insert it into the designated slots in the middle of the assembled frame. This bar provides additional stability and support.
4. **Install Metal Slats:** Place the individual metal slats across the frame. Each slat should fit securely into the

designated slots or clips along the side rails. Ensure all slats are evenly spaced and firmly in place to provide optimal mattress support.

5. **Attach Non-Slip Gaskets:** Apply the six non-slip gaskets to the top surface of the frame, where the mattress will rest. These gaskets help prevent the mattress from sliding and reduce noise.

6. **Optional Headboard Attachment:** If you wish to attach a headboard, utilize the reserved holes and brackets located at the head of the bed frame. These are designed to be compatible with various standard headboards (headboard not included).

7. **Final Check:** Before placing your mattress, ensure all connections are secure and the frame is stable.

OPERATING INSTRUCTIONS

Your IDEALHOUSE bed frame is designed for direct mattress support, eliminating the need for a box spring. Simply place your mattress directly onto the assembled metal slats.

- **Mattress Placement:** Carefully place your Queen size mattress onto the metal slats. The non-slip gaskets will help keep the mattress in place.
- **Weight Capacity:** The bed frame is designed to support up to 800 lbs. Do not exceed this weight limit to ensure the longevity and safety of the frame.
- **Under-Bed Storage:** Utilize the 6-inch clearance under the bed for convenient storage of bins, boxes, or other items. This feature helps maximize bedroom space.

MAINTENANCE

Regular maintenance will help prolong the life of your bed frame:

- **Cleaning:** Wipe down the metal frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, as they may damage the finish.
- **Periodic Checks:** Every 3-6 months, inspect all connections and joints to ensure they remain secure. Although the design is tool-free, ensuring a snug fit helps maintain stability and prevent noise.
- **Floor Protection:** The integrated non-slip gaskets also serve as floor protectors. Ensure they are intact and properly positioned to prevent scratches on your flooring.

TROUBLESHOOTING

If you encounter any issues with your bed frame, refer to the following common solutions:

- **Squeaking or Noise:**

- Ensure all frame sections and slats are fully engaged and securely connected.
- Verify that the mattress is properly seated on the non-slip gaskets.
- Check if the bed frame is on a level surface. Uneven flooring can cause stress points and noise.

• **Instability:**

- Re-check all interlocking connections to ensure they are fully engaged.
- Confirm that the center support bar is correctly installed.

• **Mattress Sliding:**

- Ensure the non-slip gaskets are properly placed and are not worn.
- Verify the mattress size matches the bed frame (Queen size for this model).

If the issue persists, please contact IDEALHOUSE customer support for further assistance.
