3. INSTALLATION INSTRUCTIONS

Follow these steps to replace your refrigerator's air filter:

1. **Locate the Air Filter Compartment:** The air filter is typically located on the upper rear wall of the fresh food compartment, often behind a vented cover. Refer to your refrigerator's user manual for the exact location if you are unsure.
2. **Open the Filter Cover:** Gently press the tabs on the filter cover or slide it open, depending on your model. Some models may require a slight upward or downward push.
3. **Remove the Old Filter:** Carefully pull the old air filter out of its housing. Note its orientation for correct installation of the new filter.
4. **Install the New Filter:** Unpack one of the new air filters. Insert the new filter into the compartment, ensuring it is oriented correctly. The filter should slide in smoothly and securely.
5. **Close the Filter Cover:** Snap or slide the filter cover back into place until it clicks or is firmly closed.
6. **Reset the Filter Indicator (if applicable):** Many refrigerators have a filter indicator light. Consult your refrigerator's manual for instructions on how to reset this indicator after replacing the filter. This usually involves pressing and holding a specific button for a few seconds.

4. OPERATION

Once installed, the air filter operates continuously to purify the air inside your refrigerator. It works passively to absorb odors and maintain a fresh environment. No further user interaction is required for its operation.

5. MAINTENANCE AND REPLACEMENT

For optimal performance, it is recommended to replace the refrigerator air filter every **6 months**. This ensures continuous odor control and efficient air purification.

- **Replacement Schedule:** Mark your calendar or set a reminder for the next replacement date.
- **Disposal:** Dispose of the old filter according to local waste disposal guidelines. The filter material is generally non-

hazardous.

6. TROUBLESHOOTING

6.1. Odors Persist After Filter Replacement

- **Check Installation:** Ensure the new filter is correctly seated in its compartment and the cover is securely closed.
- **Source of Odor:** Verify that there are no spoiled food items or spills within the refrigerator that could be causing persistent odors. Clean the refrigerator interior thoroughly if necessary.
- **Filter Age:** If the filter has been in use for more than 6 months, it may have reached the end of its effective life. Replace with a new filter.

6.2. Filter Does Not Fit

- **Verify Model Compatibility:** Double-check your refrigerator's model number against the compatibility list in Section 2. Ensure you have purchased the correct replacement filter.
- **Orientation:** Ensure the filter is being inserted in the correct orientation. Some filters are designed to fit only one way.
