6. MAINTENANCE

To ensure the longevity and optimal performance of your DoukAudio U2PRO, please follow these maintenance guidelines:

- **Cleaning:** Use a soft, dry cloth to clean the exterior of the device. Do not use liquid cleaners, aerosols, or abrasive materials, as they may damage the finish or internal components.
- **Environment:** Operate and store the device in a cool, dry place, away from direct sunlight, heat sources, and excessive humidity. Avoid environments with high dust levels.
- **Handling:** Handle the device with care. Avoid dropping it or subjecting it to strong impacts.
- **Ventilation:** Ensure proper ventilation around the device. Do not block any vents or place the device in an enclosed space that could lead to overheating.
- **Disconnection:** When disconnecting cables, always grasp the connector, not the cable itself, to prevent damage to the cable or port.

7. TROUBLESHOOTING

If you encounter issues with your DoukAudio U2PRO, please refer to the following common problems and solutions:

Problem	Possible Cause	Solution
No audio output.	Incorrect UAC mode selected. Incorrect input selected on DAC/amplifier. Loose cable connections. Source device audio settings.	Verify the UAC mode switch is set correctly for your source device (1.0 for consoles, 2.0 for PC/tablet). Disconnect/reconnect USB after changing. Ensure your DAC/amplifier is set to the correct input (Optical, Coaxial, or I2S) corresponding to the U2PRO's output. Check all cable connections are secure. Verify audio output settings on your source device (e.g., Windows Sound settings, macOS Audio MIDI Setup).
No indicator lights on U2PRO.	No power from USB source. Faulty USB cable.	Ensure the USB source device is powered on and providing power. Try a different USB port. Try a different USB-C to USB-A/C cable.
Audio distortion or dropouts.	High jitter (less common with XU316). Cable interference. Driver issues (UAC 2.0).	Ensure cables are not near strong electromagnetic interference sources. For UAC 2.0, ensure proper drivers are installed on your PC if required by your operating system (though often plug-and-play). Try a different cable.
UAC mode switch not working.	Not restarted after switching.	After changing the UAC mode switch, disconnect the USB cable from the U2PRO and reconnect it to restart the device.

If the problem persists after trying these solutions, please contact Douk Audio customer support for further assistance.
