4. MAINTENANCE

Regular maintenance will extend the life and appearance of your FammyLoft storage shed.

Cleaning

- Clean the exterior panels periodically with mild soap and water. Avoid abrasive cleaners or harsh chemicals that could damage the finish.
- Rinse thoroughly with clean water.
- Clear any debris, such as leaves or dirt, from the roof and around the base to ensure proper water drainage.

Inspection

- Annually inspect all bolts and screws for tightness. Tighten as needed.
- Check door hinges and latches for smooth operation and lubricate if necessary.
- Examine the foundation and anchoring points to ensure the shed remains securely fastened.

Weather Protection

The shed is constructed with UV-coated galvanized panels and a rust-resistant steel frame, providing protection against sun, rain, and snow. The sloped roof design helps prevent water buildup. In areas with heavy snowfall, periodically remove excessive snow from the roof to prevent structural stress.

Figure 5: The shed features upgraded architecture for enhanced durability, including waterproof and rustproof materials, wind resistance up to 24-30 MPH, and a snow load capacity of 15 PSF.

5. TROUBLESHOOTING

This section addresses common issues you might encounter with your storage shed.

Issue	Possible Cause	Solution
Difficulty aligning panels during assembly.	Uneven base or slight manufacturing tolerances.	Ensure the base is perfectly level. Loosen adjacent bolts, adjust panels, then retighten. A rubber mallet can gently assist alignment.
Doors do not close or latch properly.	Door frame or shed base is not square.	Check the shed's squareness and levelness. Adjust the base or door hinges as needed. Ensure all frame bolts are tightened evenly.
Water pooling on the roof.	Debris on the roof or improper slope.	Clear any leaves or debris from the roof. Verify the roof panels are installed correctly to maintain the intended slope for water runoff.

Issue	Possible Cause	Solution
Shed feels unstable or moves in wind.	Not properly anchored to the ground.	Ensure the shed is securely anchored to a concrete slab or other solid foundation using appropriate anchoring hardware (not always included).
