3.2 Attaching the Extension Table

Align the pins on the extension table with the corresponding holes on the sewing machine and gently push to secure it. This provides a larger working surface for your projects.

3.3 Threading the Machine

Correct threading is crucial for proper operation. Follow these steps carefully:

1. **Upper Threading:** Follow the numbered guides on the machine for the upper thread path. Ensure the thread passes through the take-up lever and needle eye correctly.
2. **Bobbin Winding:** Place an empty bobbin on the bobbin winder spool. Guide the thread from the spool pin through the bobbin winder tension disk and onto the bobbin. Start the machine briefly to wind the bobbin.

3. **Lower Bobbin:** Insert the wound bobbin into the bobbin case located under the needle plate. Ensure the thread is correctly positioned in the tension spring.

5. MAINTENANCE

5.1 Cleaning

Regularly clean lint and dust from the bobbin area and feed dogs using a small brush. Ensure the machine is unplugged before cleaning.

5.2 Needle Replacement

Replace the needle regularly, especially if it becomes bent, dull, or if you are experiencing skipped stitches. Always use the correct needle type and size for your fabric.

5.3 Storage

When not in use, store the machine in a dry, dust-free environment. The compact design and storage drawers make it easy to keep accessories organized.

6. TROUBLESHOOTING

If you encounter issues, refer to the following common problems and solutions:

- **Thread Breaking:** Check if the thread is correctly tensioned (refer to section 4.2). Ensure the needle is not bent or dull and is inserted correctly. Verify the thread path is clear and not snagged.
- **Skipped Stitches:** Replace the needle with a new one. Ensure the needle is inserted fully and correctly. Check that the fabric is properly placed under the presser foot.
- **Bottom Thread Tangling:** This often indicates incorrect bobbin threading or tension. Re-thread the bobbin carefully, ensuring it sits correctly in its case and the thread is properly guided. Adjust upper thread tension if necessary.
- **Machine Not Starting:** Ensure the power adapter is securely connected or that fresh batteries are installed. Check that the power switch is in the 'ON' position.
- **Reverse Sewing Malfunction:** Ensure the reverse sewing button is fully engaged. If the issue persists, re-check threading and needle condition.
