## MAINTENANCE

---

To ensure the longevity and optimal performance of your Polaring M8 console, follow these maintenance guidelines:

- **Cleaning:** Use a soft, dry cloth to clean the console and controllers. Avoid using liquid cleaners or abrasive materials.
- **Storage:** Store the console and accessories in a cool, dry place away from direct sunlight and extreme temperatures.
- **Battery Care:** Remove batteries from controllers if they will not be used for an extended period to prevent leakage.
- **Ventilation:** Ensure the game stick has adequate ventilation during operation to prevent overheating.

## TROUBLESHOOTING

---

If you encounter any issues with your Polaring M8 console, please refer to the following troubleshooting steps:

Problem	Possible Cause	Solution
No power/Console not turning on	Power cable not connected properly; insufficient power supply.	Ensure USB power cable is securely connected. Try a different USB power adapter or port.
No signal on TV/Monitor	Incorrect HDMI input selected; HDMI cable loose or faulty.	Verify the correct HDMI input is selected on your display. Reconnect the HDMI cable firmly. Try a different HDMI port or cable.
Controllers not responding	Low or dead batteries; controllers not paired; wireless receiver disconnected.	Replace AAA batteries in controllers. Ensure the wireless receiver is securely plugged into the game stick. Re-pair controllers if necessary (refer to specific pairing instructions if provided separately).
Game lag or input delay	Wireless interference; console overheating; game emulation issues.	Ensure controllers are close to the receiver. Provide adequate ventilation for the game stick. Some emulated games may exhibit minor input delays.
Games resetting or not saving progress	TF card issues; specific game emulation behavior.	Ensure the TF card is properly inserted and not corrupted. Some retro games may not have built-in save features or require specific in-game actions to save.
Console gets hot during use	Normal operation; insufficient ventilation.	It is normal for the device to generate some heat. Ensure it is in an open area with good airflow. If it becomes excessively hot, discontinue use and contact support.
