3. SETUP AND ASSEMBLY

The Feonase King Size Bed Frame is designed for straightforward assembly. It is highly recommended to have two people for assembly due to the weight and size of the components. An electric screwdriver with a hex head bit can significantly speed up the process, but be careful not to overtighten screws.

3.1 Unpacking and Preparation

- Unpack all components and verify against the included parts list in your installation manual.
- Lay out all parts on a clean, soft surface (like a rug or blanket) to prevent scratches.
- Ensure you have adequate space for assembly.

3.2 Assembly Steps

Follow the detailed step-by-step instructions provided in the physical installation manual included with your bed frame. Pay close attention to the diagrams and ensure all parts are oriented correctly before tightening fasteners. Extra hardware is typically included, so do not be concerned if you have a few pieces left over.

4. OPERATING INSTRUCTIONS

4.1 Hydraulic Lift System

The bed frame features a hydraulic lift system for easy access to the underbed storage. To lift the mattress platform, firmly grasp the hand lifting strap located at the foot of the bed and pull upwards. The hydraulic pistons will assist in lifting and holding the platform in the open position. To close, gently push the platform downwards. **Important: The hydraulic lift system requires the weight of a mattress to function correctly and close easily. If the system feels stiff or does not compress, ensure your mattress is placed on the frame.**

5. MAINTENANCE

To maintain the appearance and functionality of your Feonase bed frame, follow these simple guidelines:

- **Cleaning Fabric:** For general cleaning, gently vacuum the upholstered surfaces using a soft brush attachment. For spills, blot immediately with a clean, dry cloth. Do not rub. For stubborn stains, consult a professional upholstery cleaner.
- **Cleaning Frame:** Wipe down metal and wooden parts with a soft, damp cloth. Avoid harsh chemicals or abrasive cleaners.
- **Hardware Check:** Periodically check all bolts and screws to ensure they are tight. Retighten if necessary to maintain stability.
- **Hydraulic System:** Keep the hydraulic pistons clean and free of debris. Do not apply lubricants unless specifically instructed

by the manufacturer.

6. TROUBLESHOOTING

Problem	Possible Cause	Solution
Hydraulic lift mechanism is stiff or won't close.	Insufficient weight on the bed frame. The hydraulic pistons are designed to work with the weight of a mattress.	Ensure your mattress is placed on the bed frame. The system will then operate as intended.
Bed frame makes creaking noises.	Loose hardware or uneven floor.	Check and tighten all bolts and screws. Ensure the bed frame is on a level surface. The frame includes noise-reducing foam, but external factors can still cause noise.
Devices not charging from headboard ports.	Power cord not plugged in or faulty device/cable.	Verify the bed frame's power cord is securely plugged into a working wall outlet. Test with different devices and charging cables.
