4. SETUP

The Twist Beverage Bottle Opener requires no assembly. It is ready for immediate use upon unboxing.

Before First Use:

- Inspect the opener for any signs of damage.
- Wash the opener with warm, soapy water and rinse thoroughly before its first contact with beverage containers.
- Ensure the opener is dry before storage or use.

5. OPERATING INSTRUCTIONS

Follow these steps to effectively open or tighten bottle caps using your silicone opener:

1. **Select the Correct Size:** Ensure the bottle cap fits within the inner grooves of the opener. The opener is suitable for mineral water bottles with a cap diameter of approximately 1.16 inches.
2. **Position the Opener:** Place the opener over the bottle cap. Ensure the cap is firmly seated within the inner grooves of the opener. It is crucial that the cap is fixed in the groove and not floating on the surface to ensure proper grip.
3. **Twist to Open:** With a firm grip on the opener, twist it counter-clockwise to loosen and open the bottle cap.
4. **Twist to Tighten:** To tighten a cap, place the opener over the cap, ensure it's seated firmly, and twist clockwise until the cap is secure.

6. MAINTENANCE

To ensure the longevity and hygiene of your silicone bottle openers, follow these simple maintenance guidelines:

- **Cleaning:** Wash the openers by hand with warm water and mild dish soap after each use, especially if they come into contact with sticky liquids.
- **Drying:** Allow the openers to air dry completely or wipe them with a clean cloth before storing.
- **Storage:** Store in a clean, dry place away from direct sunlight and extreme temperatures.
- **Avoid Harsh Chemicals:** Do not use abrasive cleaners or harsh chemicals, as these can damage the silicone material.

7. TROUBLESHOOTING

If you encounter any issues while using your bottle opener, refer to the following common problems and solutions:

Problem: The opener slips on the cap and does not twist.

- **Solution 1:** Ensure the bottle cap is fully inserted into the inner grooves of the opener. The cap must be fixed, not floating.
- **Solution 2:** Verify that the cap diameter is appropriate for the opener (approx. 1.16 inches). Caps that are too large or too small may not provide sufficient grip.
- **Solution 3:** Apply firm, even pressure while twisting. The silicone is designed to grip, but consistent pressure is needed.
- **Solution 4:** Check if the cap or opener is wet or oily, which can reduce friction. Clean and dry both surfaces if necessary.

Problem: The opener feels too stiff or rigid.

- **Solution:** The silicone material is designed to be durable yet flexible. Over time and with use, it may become slightly more pliable. Ensure you are using the correct twisting motion.
