## 4. SETUP AND ASSEMBLY

Careful assembly is key to a successful model. Take your time and follow the steps outlined in the included instruction booklet. The following general steps apply:

- Preparation:** Carefully remove parts from the sprues using a hobby knife or nippers. Clean any excess plastic (flash) with a small file or sandpaper. Test fit parts before applying glue.
- Sub-Assemblies:** Begin by assembling smaller sections such as the engine, interior, and chassis. Pay close attention to the orientation of parts.
- Painting:** Paint is required to achieve the desired finish. Refer to the included painting guide for color recommendations. It is often easier to paint certain components before final assembly.
- Chassis and Body:** Assemble the chassis components, including the suspension and drivetrain. Once the interior is complete and painted, install it into the chassis. Finally, attach the body shell.
- Detailing:** Attach clear parts for windows and lights. Apply chrome parts for bumpers, trim, and wheels. This kit includes two wheel options, a removable top, a roll bar, and a detailed interior for customization.

- 2 WHEEL OPTIONS, REMOVABLE TOP, ROLL BAR AND DETAILED INTERIOR.
- EXPANDED DECALS AND RETRO DELUXE™ AMT REPRODUCTION PACKAGING.

## 5. FINISHING AND DISPLAY

Once the main assembly is complete, you can apply the waterslide decals. Cut each decal carefully, dip it in water for a few seconds, and slide it onto the model. Position it gently and blot away excess water. Allow decals to dry completely before handling.

After all decals are applied and dry, you may consider applying a clear coat to protect the paint and decals. Your finished model is now ready for display. The assembled model measures approximately 7 inches in width, 2.75 inches in depth, and 2.5 inches in height.

## 6. MAINTENANCE

To preserve the appearance of your model, regular maintenance is recommended:

- **Dusting:** Gently dust the model with a soft brush or a microfiber cloth to prevent dust buildup. Avoid abrasive materials that could scratch the paint or decals.
- **Cleaning:** If necessary, lightly dampen a soft cloth with water (and a tiny amount of mild soap if needed) to clean surfaces. Avoid harsh chemicals or solvents, as these can damage paint and plastic.
- **Storage:** Store your model in a cool, dry place away from direct sunlight to prevent fading and warping. Display cases can offer additional protection from dust and accidental damage.

## 7. TROUBLESHOOTING

---

Model building can present challenges. Here are some common issues and solutions:

- **Parts Not Fitting:** Ensure all flash is removed from parts. Test fit parts before gluing. Sometimes, a small amount of sanding or filing may be required for a perfect fit.
- **Decals Not Adhering:** Ensure the surface is clean and smooth. Use decal setting solutions to help decals conform to irregular surfaces and adhere better.
- **Paint Issues:** Apply paint in thin, even coats to avoid runs or thick textures. Allow each coat to dry thoroughly before applying the next. Ensure proper surface preparation (cleaning, priming) for best results.
- **Missing or Damaged Parts:** Refer to the warranty information for instructions on how to address missing or defective components.
