Please read this manual thoroughly before using the device to ensure proper functionality and to maximize its lifespan.

WHAT'S IN THE BOX

Upon opening your HKFUG QR08 package, you should find the following components:

- Body camera x1
- User manual x1
- USB cable x1
- Card reader x1

PRODUCT OVERVIEW

The HKFUG QR08 body camera is designed for portability and ease of use, weighing only 1.9oz. It features a compact design with essential controls and indicators.

180 ° Rotating Lens Design

The lens of the body cam could be adjustable from 0-180 degrees, it can better meet different recording angles.

SETUP

1. Charging the Device

Before initial use, fully charge the body camera. Connect the provided USB cable to the camera's USB-Type-C port and a power source (e.g., computer USB port or wall adapter). The built-in 1200mAh rechargeable battery supports approximately 4 hours of charging time for up to 7 hours of video recording or 10 hours of audio recording. The camera can also record while charging.

2. Inserting a Micro SD Card

The camera requires a Micro SD card (not included) for storing recordings. Locate the TF card slot on the side of the device. Gently insert the Micro SD card into the slot until it clicks into place. The camera supports Micro SD cards up to 128GB. Ensure the card is inserted correctly to avoid damage and ensure proper recording functionality.

OPERATING INSTRUCTIONS

1. Power On/Off

- To power on, slide the ON/OFF switch to the 'ON' position. The device will boot up and display the main interface on the LCD screen.
- To power off, slide the ON/OFF switch to the 'OFF' position. Ensure all recordings are saved before powering off.

2. Video Recording

- From the main interface, press the designated video recording button (refer to the device diagram in the included paper manual for exact button location).
- The camera will begin recording video at either 1080P or 720P resolution, depending on your settings. A recording indicator (e.g., a flashing light or on-screen icon) will appear.
- To stop recording, press the video recording button again. The video file will be saved to the Micro SD card.

3. Audio Recording

- To initiate audio recording, press the dedicated audio recording button.
- An audio recording indicator will confirm the device is recording.
- Press the audio recording button again to stop and save the audio file.

4. Taking Photos

- To capture a still image, press the photo button.
- The camera will take a snapshot and save it to the Micro SD card.

6. White Fill Light

- The camera is equipped with a white fill light for improved recording in low-light environments.
- Activate the fill light through the settings menu or a dedicated button (refer to the paper manual).

7. Playback

- To review recorded videos or photos directly on the device, navigate to the playback menu using the LCD screen and navigation buttons.

- Select the desired file to play or view.

8. Connecting to a Computer

- To transfer files, connect the camera to your computer using the provided USB cable.
- The camera will appear as a removable disk drive. You can then access and copy your video and photo files.
- *Note:* The video files are typically in AVI format. For best results, use a media player that supports AVI, such as VLC Media Player. Chromebooks may not fully support direct playback from the device; in such cases, transfer files to the computer first.

MAINTENANCE

- **Cleaning:** Use a soft, dry cloth to clean the camera body. For the lens, use a specialized lens cleaning cloth and solution. Avoid abrasive materials or harsh chemicals.
- **Storage:** Store the camera in a cool, dry place away from direct sunlight and extreme temperatures.
- **Battery Care:** To prolong battery life, avoid fully discharging the battery frequently. Charge the device regularly, even if not in use for extended periods.
- **Firmware Updates:** Check the manufacturer's website periodically for any available firmware updates to ensure optimal performance.

TROUBLESHOOTING

- **Camera not turning on:** Ensure the battery is charged. Connect to a power source and try again.
- **Cannot record:** Check if a Micro SD card is inserted correctly and has sufficient free space. The card might need to be formatted (refer to the device settings).
- **Poor video quality:** Ensure the lens is clean. Check the recording resolution settings (1080P provides higher quality than 720P).
- **SD card not recognized:** Reinsert the Micro SD card. Try a different, compatible Micro SD card. Ensure the card is not damaged.
- **Device unresponsive:** If the camera freezes, try pressing and holding the power button for an extended period to force a restart. If available, use a reset pinhole.
