4.2 General Cleaning

Use a soft, dry cloth to wipe down the exterior of the case. For internal cleaning, use compressed air to remove dust from fans and components. Ensure the PC is powered off and unplugged before performing any internal cleaning.

5. TROUBLESHOOTING

5.1 Cooling Performance Issues

If you experience higher than expected component temperatures, ensure all fans are spinning correctly and are free from

obstructions. Verify that radiators are properly installed and not clogged with dust. The mesh side panel generally offers better thermal performance compared to a tempered glass side panel due to improved airflow.

5.2 Cable Connection Difficulties

Some users have reported tight angles for front USB 3.2 case connectors. Consider using a 90-degree adapter if you encounter difficulty connecting these to your motherboard. Ensure all power and data cables are securely connected and not obstructing airflow.

5.3 Physical Damage or Misalignment

In rare cases, the case may arrive with minor manufacturing imperfections or slight panel misalignment. If panels do not sit flush, gently adjust them. For significant damage, contact customer support.
