TROUBLESHOOTING

If you encounter any issues with your sofa table, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Table is wobbly or unstable.	Loose connections; uneven floor; not secured to wall.	Ensure all screws and bolts are fully tightened. Adjust the leveling feet. Install or verify the anti-tip kit is properly secured to the wall.
Power outlets are not working.	Table not plugged in; wall outlet issue; overloaded circuit.	Check if the table's power cord is securely plugged into a functional wall outlet. Test the wall outlet with another device. Reduce the number of devices plugged into the power strip.

Problem	Possible Cause	Solution
USB ports are not charging devices.	Device incompatibility; faulty cable; power strip issue.	Ensure your device is compatible with 5V/2A charging. Try a different USB cable. Verify the AC outlets on the same power strip are working.
Table does not sit flush against the wall due to baseboards.	Standard baseboard design.	This is a common occurrence. The table is designed to be narrow and can still function effectively. Use the anti-tip kit for stability if there is a significant gap.
