## 7. TROUBLESHOOTING

If you encounter any issues, refer to the following common solutions:

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or screws.	Check and tighten all assembly bolts and screws. Ensure all components are correctly aligned.
Squeaking noises.	Loose connections or friction between parts.	Tighten all bolts. Apply a small amount of lubricant (e.g., silicone spray) to contact points between metal parts if necessary. Ensure slats are properly seated.
Missing parts.	Packaging error or lost during unpacking.	Carefully check all packaging materials. If parts are still missing, contact WLIVE Customer Support.
Mattress slides on the frame.	No anti-slip measures.	Consider placing a non-slip mat between the mattress and the slats.
