6.3 General Cleaning

To ensure optimal performance and longevity, regularly clean the exterior of the Mini PC with a soft, dry cloth. Ensure ventilation openings are free from dust accumulation.

7. TROUBLESHOOTING

This section addresses common issues you might encounter:

- No Display Output:**
Ensure all display cables (HDMI, DP, USB4.0) are securely connected to both the Mini PC and the monitor. Try a different cable or monitor if possible. Verify the monitor input source is correctly selected.
- Fan Noise is Loud:**
The fan speed adjusts based on system load. If the fan is excessively loud during light use, check for dust accumulation in the vents. Ensure the Mini PC is placed in a well-ventilated area. Consider switching to 'Silent Mode' if high performance is not required.
- Keyboard Layout Issues:**
If your keyboard layout is incorrect after initial setup, navigate to your operating system's settings (e.g., Windows Settings > Time & Language > Language & Region) to adjust the keyboard layout to your preference.
- SSD Heatsink Clearance:**
When installing an additional SSD, be aware that some SSDs with large heatsinks may not fit due to limited internal space. Choose a low-profile SSD or one without an integrated heatsink if you encounter this issue.
- Accessing BIOS:**
To enter the BIOS/UEFI settings, power on the Mini PC and repeatedly press the **ESC** key during startup.
- External GPU (eGPU) via Oculink:**
While the M.2 slot can be converted to Oculink for eGPU, this is an advanced configuration. Compatibility may vary depending on the Oculink board version and eGPU. Issues with recognition or stability may occur, potentially requiring multiple reboots or power cycles. It is recommended to use the M.2 slot on the side where the WiFi card is located for better lane allocation.
