Setup and Assembly

Assembly typically takes approximately 30 minutes. It is recommended to have two people for assembly to ensure ease and safety. Please refer to the included instruction manual for detailed step-by-step diagrams.

1. **Unpack Components:** Carefully remove all parts from the packaging. Lay them out on a clean, soft surface to prevent scratches. Verify all parts are present against the package contents list.
2. **Assemble Frame Sides:** Connect the side rails to the headboard and footboard using the provided hardware. Ensure all connections are secure but do not fully tighten screws until the entire frame is assembled.
3. **Install Center Support:** Attach the central support beam and its adjustable supporting legs to the frame. These provide enhanced stability and weight capacity.
4. **Attach Slats:** Position the wood slats across the frame. The slats feature Velcro strips on the underside to secure them to the frame and padded strips between wood and metal components to prevent friction and noise. Ensure each slat is properly aligned and secured.
5. **Final Tightening:** Once all components are in place and aligned, fully tighten all screws and bolts.
6. **Adjust Headboard:** Adjust the headboard to your desired height (see Operating Instructions).

Maintenance

Cleaning

- For general cleaning of the upholstered surfaces, wipe with a dry cloth.
- Avoid using harsh chemicals or abrasive cleaners, as these may damage the fabric.
- Spot clean any spills immediately with a damp cloth and mild soap, then blot dry.

Structural Care

- Periodically check all bolts and screws to ensure they remain tight. Re-tighten as necessary to maintain stability.
- The bed frame is designed with Velcro strips under the wood slats and padded strips between metal components to minimize noise. Inspect these areas if any squeaking develops.
- Ensure the adjustable support legs in the middle of the frame are properly positioned and stable.

Troubleshooting

Bed Frame is Squeaking

- **Check Connections:** Ensure all bolts and screws throughout the frame are securely tightened. Loose connections are a common cause of squeaking.
- **Inspect Slats:** Verify that the wood slats are correctly positioned and that the Velcro strips are adhering properly to the frame. Check for any dislodged padded strips between the wood and metal components.
- **Examine Support Legs:** Confirm that the four adjustable supporting legs in the middle of the frame are firmly on the ground and not loose.

Bed Frame Feels Unstable

- **Re-tighten All Hardware:** Go through all assembly points and ensure every bolt and screw is fully tightened.
- **Verify Leg Placement:** Ensure all bed legs, including the central support legs, are making firm contact with the floor. Adjust if necessary.
- **Check Assembly:** Review the assembly steps to confirm that all components, especially the internal steel frames and wood slats, are installed correctly according to the instructions.
