Goplus GVLV300R-T20

Goplus 7 FT Pre-Lit Artificial Christmas Tree Instruction Manual

Model: GVLV300R-T20

Introduction

This manual provides detailed instructions for the assembly, operation, and maintenance of your Goplus 7 FT Pre-Lit Artificial Christmas Tree. Please read this manual thoroughly before setup to ensure safe and proper use. This artificial Christmas tree is designed to replicate a natural pine tree, featuring cashmere pine needles, natural pine cones, and warm white LED lights.

Setup Instructions

Follow these steps to assemble your artificial Christmas tree. It is recommended to wear the included gloves during the fluffing process.

1. **Step 1: Unfold the Base.** Carefully unfold the crossed metal base and place it on a flat, stable surface. The base is designed to be foldable for easy storage.
2. **Step 2: Connect the Tree Sections.** The tree comes in 3 sections. Insert the bottom section into the metal base, ensuring it is securely seated. Then, connect the middle section to the bottom section, and finally the top section to the middle section. The pre-assembled screw on the base helps secure the tree.
3. **Step 3: Connect Wires.** Locate the electrical connectors between each tree section and securely connect them.

Ensure all connections are firm to allow the lights to function properly.

4. **Step 4: Fluff Leaves for a Great Shape.** Starting from the bottom section and working your way up, gently spread out and shape each branch tip. This process, known as "fluffing," helps the tree achieve its full and realistic appearance.

Operating Instructions

Your Goplus artificial Christmas tree is pre-lit with warm white LED lights for immediate use after assembly.

- **Power Connection:** After assembling the tree and connecting all internal wires, plug the UL-certified adapter into a standard electrical outlet. The lights will illuminate automatically.
- **Light Features:** The tree features 300 warm white LED lights, equipped with clear incandescent bulb covers. These low-voltage LED lights are energy-saving and designed for safe, long-term operation.

Maintenance and Storage

Proper care and storage will extend the life of your artificial Christmas tree.

- **Cleaning:** To clean the tree, gently wipe the branches with a dry or slightly damp cloth. Avoid using harsh chemicals or abrasive cleaners, as these may damage the PVC material or flocking.
- **Material Durability:** The tree is constructed from 100% new PVC material, which is flame-retardant, fade-resistant, and smell-free, ensuring lasting quality.
- **Storage:** After the holiday season, disassemble the tree by reversing the setup steps. The 3-section structure and foldable metal base allow for compact storage. Store the tree in its original packaging or a suitable storage bag in a cool, dry place away from direct sunlight.

Image 6: Diagram illustrating the properties of the 100% new PVC material: flame-retardant, fade-resistant, smell-free, and built to last.

Image 7: Detailed view of the 502 lush branch tips, 28 natural pine cones, and cashmere pine needles, contributing to the tree's authentic appearance.

Troubleshooting

If you encounter any issues with your Goplus Christmas tree, please refer to the following common solutions:

- **Lights Not Working:**
  - Ensure the power adapter is securely plugged into a working electrical outlet.
  - Check all internal wire connections between the tree sections to ensure they are firmly connected.
  - Inspect individual bulbs for any loose connections or damage. While LED lights are durable, occasional issues can occur.
- **Tree Stability:**
  - Verify that the metal base is fully unfolded and placed on a level surface.

- Confirm that the tree sections are correctly inserted into each other and the base, and the pre-assembled screw is tightened.

- **Branch Appearance:**
  - If branches appear sparse, ensure they have been thoroughly fluffed and shaped according to the setup instructions.
