## 4. SETUP

### 4.1 Initial Charging

Before first use, fully charge the keyboard using the provided USB-C cable. Connect the cable to the keyboard's USB-C port and the other end to a computer's USB port. **Do not use mobile phone fast chargers or overcurrent/overvoltage chargers**, as this may damage the battery.

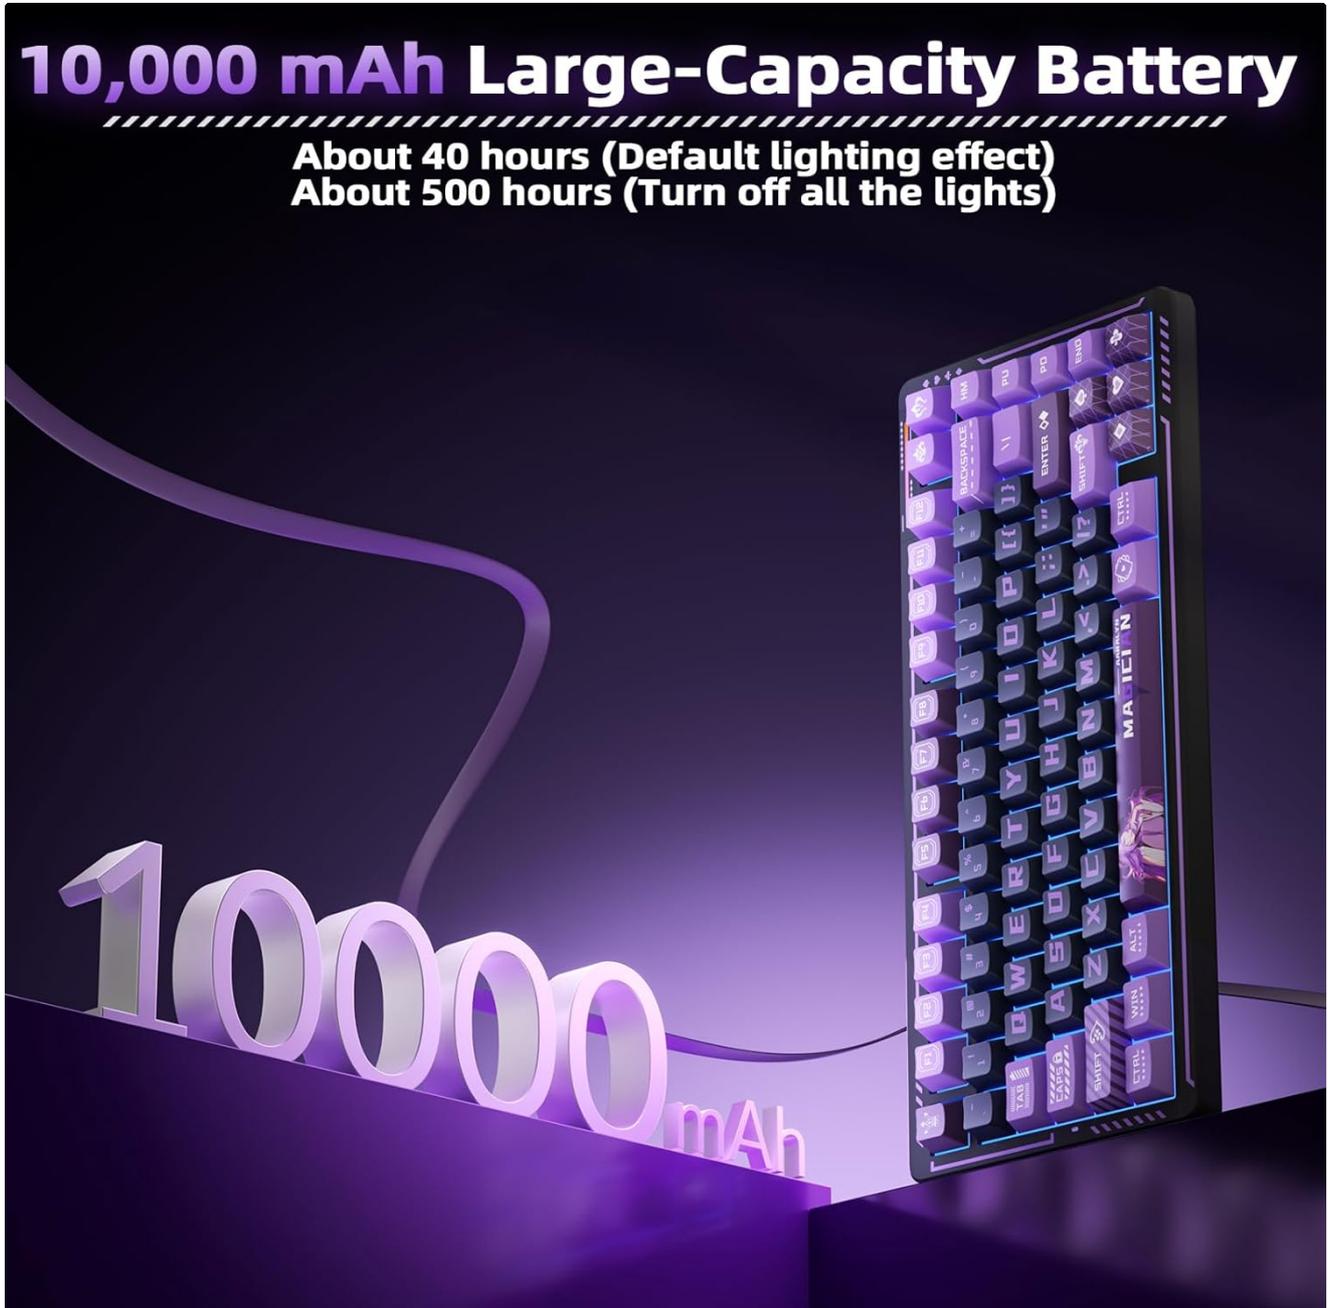

Image 3: The K75 keyboard connected via USB-C, illustrating its 10,000 mAh large-capacity battery, capable of approximately 40 hours with RGB lighting or 500 hours with lights off.

### 4.2 Connectivity Modes

The K75 keyboard supports three connection modes: 2.4GHz wireless, Bluetooth (BT5.0), and wired USB-C. Use the switch located on the top edge of the keyboard to select your desired mode.

- **2.4GHz Wireless:** Insert the USB receiver into an available USB port on your computer. Switch the keyboard to '2.4G' mode. The keyboard should connect automatically.
- **Bluetooth (BT5.0):** Switch the keyboard to 'BT' mode. On your device (PC, laptop, smartphone, tablet), search for Bluetooth devices and select 'K75'. The keyboard can store up to 5 different Bluetooth devices.
- **Wired USB-C:** Connect the USB-C cable from the keyboard to your computer. Switch the keyboard to 'USB' mode. This mode provides a stable connection and is required for driver customization.

## 5. OPERATING INSTRUCTIONS

### 5.1 RGB Backlighting

The K75 keyboard features 16.8 million color RGB backlighting with various effects. You can adjust the lighting using keyboard shortcuts or the dedicated software driver.

PBT keycaps

Image 7: The K75 keyboard with several keycaps and switches removed, demonstrating its hot-swappable feature. It highlights the 'Flower Field Switch' specifications and the durable PBT keycaps.

To replace a switch:

1. Carefully remove the keycap using the provided keycap puller.
2. Use a switch puller (not included, but often comes with replacement switches) to gently pull the switch upwards until it detaches from the PCB.
3. Align the pins of the new switch with the holes on the PCB and press down firmly until it clicks into place. Ensure the switch is properly seated to avoid bent pins.
4. Reattach the keycap.

## 6. MAINTENANCE

### 6.1 Cleaning

To clean your keyboard, first disconnect it from all power sources. Use a soft, lint-free cloth dampened with a small amount of water or a mild cleaning solution. Avoid spraying liquids directly onto the keyboard. For cleaning between keycaps, use a can of compressed air or the provided keycap puller to remove keycaps and clean the switches and plate.

## 6.2 Battery Care

To prolong battery life, always charge the keyboard exclusively via a computer's USB port. Avoid using mobile phone fast chargers or any chargers that deliver overcurrent or overvoltage, as these can degrade the battery over time.

## 7. TROUBLESHOOTING

- **Keyboard not responding:** Ensure the keyboard is charged and the correct connection mode (2.4G, BT, or USB) is selected. For wireless modes, check if the USB receiver is properly inserted or if Bluetooth is paired. Try connecting via USB-C cable.
- **RGB lighting not working:** Check keyboard brightness settings using Fn shortcuts. Ensure the driver software is correctly installed and configured if using custom effects.
- **Keys not registering:** If a specific key is not working, try removing and re-seating its switch. If the issue persists, the switch may need replacement.
- **Driver software issues:** Ensure the keyboard is connected via USB-C cable to a Windows system when using the driver. Reinstall the driver if necessary.
