3. OPERATING INSTRUCTIONS

3.1 Control Panel

Your refrigerator is equipped with an electronic control panel, typically located inside the refrigerator compartment,

allowing you to adjust temperature settings and activate special functions.

3.2 Temperature Settings

- To adjust the temperature, press the temperature control button on the panel. Each press cycles through available temperature settings.
- A colder setting is recommended for faster cooling or when the ambient temperature is high.
- The recommended temperature for the refrigerator compartment is typically +4°C, and for the freezer compartment, -18°C.

3.3 Fresh 0°C Area

The Fresh 0°C Area is a specialized drawer designed to maintain a temperature close to 0°C. This environment is ideal for storing fresh meat, fish, and delicate produce, extending their shelf life and preventing cross-contamination with other foods.

3.4 Total No Frost Circle+ Technology

The Total No Frost Circle+ system ensures that cold air is distributed evenly throughout both the refrigerator and freezer compartments. This technology prevents ice and frost buildup, eliminating the need for manual defrosting and maintaining optimal conditions for food preservation.
