Kollgux TC-013

Kollgux Dog Bark Collar Pro (Model TC-013) Instruction Manual

Effective Bark Control for Dogs 5-150 lbs

1. Introduction

Thank you for choosing the Kollgux Dog Bark Collar Pro. This device is designed to help manage and reduce excessive barking, howling, and whining in dogs weighing between 5 and 150 lbs. It features advanced AI sound recognition, multiple correction modes, and a durable, waterproof design to provide a safe and effective training experience. Please read this manual thoroughly before use to ensure proper operation and the well-being of your pet.

2. Package Contents

- Kollgux Dog Bark Collar Pro Device
- Adjustable Nylon Collar Strap with Reflective Strips
- USB Charging Cable
- Short Contact Points (pre-installed)
- Long Contact Points
- Silicone Covers for Contact Points (2 sets for different hair lengths)
- User Manual

3. Device Overview

The Kollgux Dog Bark Collar Pro, showing its main unit with a digital display and the adjustable collar strap.

Key Components:

- **Main Unit:** Houses the AI chip, brushless motors, battery, and digital display.
- **Digital Display:** Shows battery level, sensitivity level, and active correction mode.
- **Power Button:** Turns the device on/off.
- **Mode/Sensitivity Adjustment Buttons:** Used to cycle through modes and adjust intensity levels.
- **Contact Points:** Deliver static correction (if enabled). Available in short and long sizes.
- **Silicone Covers:** Provide comfort and ensure proper contact for different coat lengths.
- **Collar Strap:** Adjustable and features reflective strips for visibility.
- **Charging Port:** USB-C port for recharging the device.

4. Setup and Fitting

4.1 Charging the Device

Before first use, fully charge the bark collar. Connect the provided USB charging cable to the collar's charging port and a suitable USB power adapter. The LED battery indicator on the digital display will show charging progress. A full charge typically takes 2 hours and provides up to 20 days of use.

4.2 Attaching Contact Points and Silicone Covers

1. Select the appropriate contact point length (short for short-haired dogs, long for long-haired dogs) to ensure proper skin contact.
2. Screw the chosen contact points firmly into the designated holes on the back of the main unit.
3. Place the corresponding silicone covers over the contact points for added comfort and to prevent irritation.

4.3 Fitting the Collar

1. Place the collar around your dog's neck, ensuring the main unit is positioned centrally on the underside of the neck.
2. Adjust the strap so that it is snug but not too tight. You should be able to fit two fingers comfortably between the collar and your dog's neck.
3. Trim any excess strap length if necessary, and use the buckle to secure it.

The collar includes silicone covers for comfort, a reflective strap for visibility, and an auto-sleep mode for safety.

5. Operating Modes and Settings

The Kollgux Dog Bark Collar Pro offers 4 adjustable correction modes and 7 sensitivity levels to suit individual dog temperaments and barking habits.

5.1 Power On/Off

- To turn on: Press and hold the power button until the display illuminates.
- To turn off: Press and hold the power button until the display turns off.

5.2 Adjusting Modes and Sensitivity

The collar offers four distinct correction modes, ranging from gentle to firm, suitable for various dog sizes and temperaments.

Use the mode/sensitivity adjustment buttons on the device to cycle through the available modes and adjust their intensity levels:

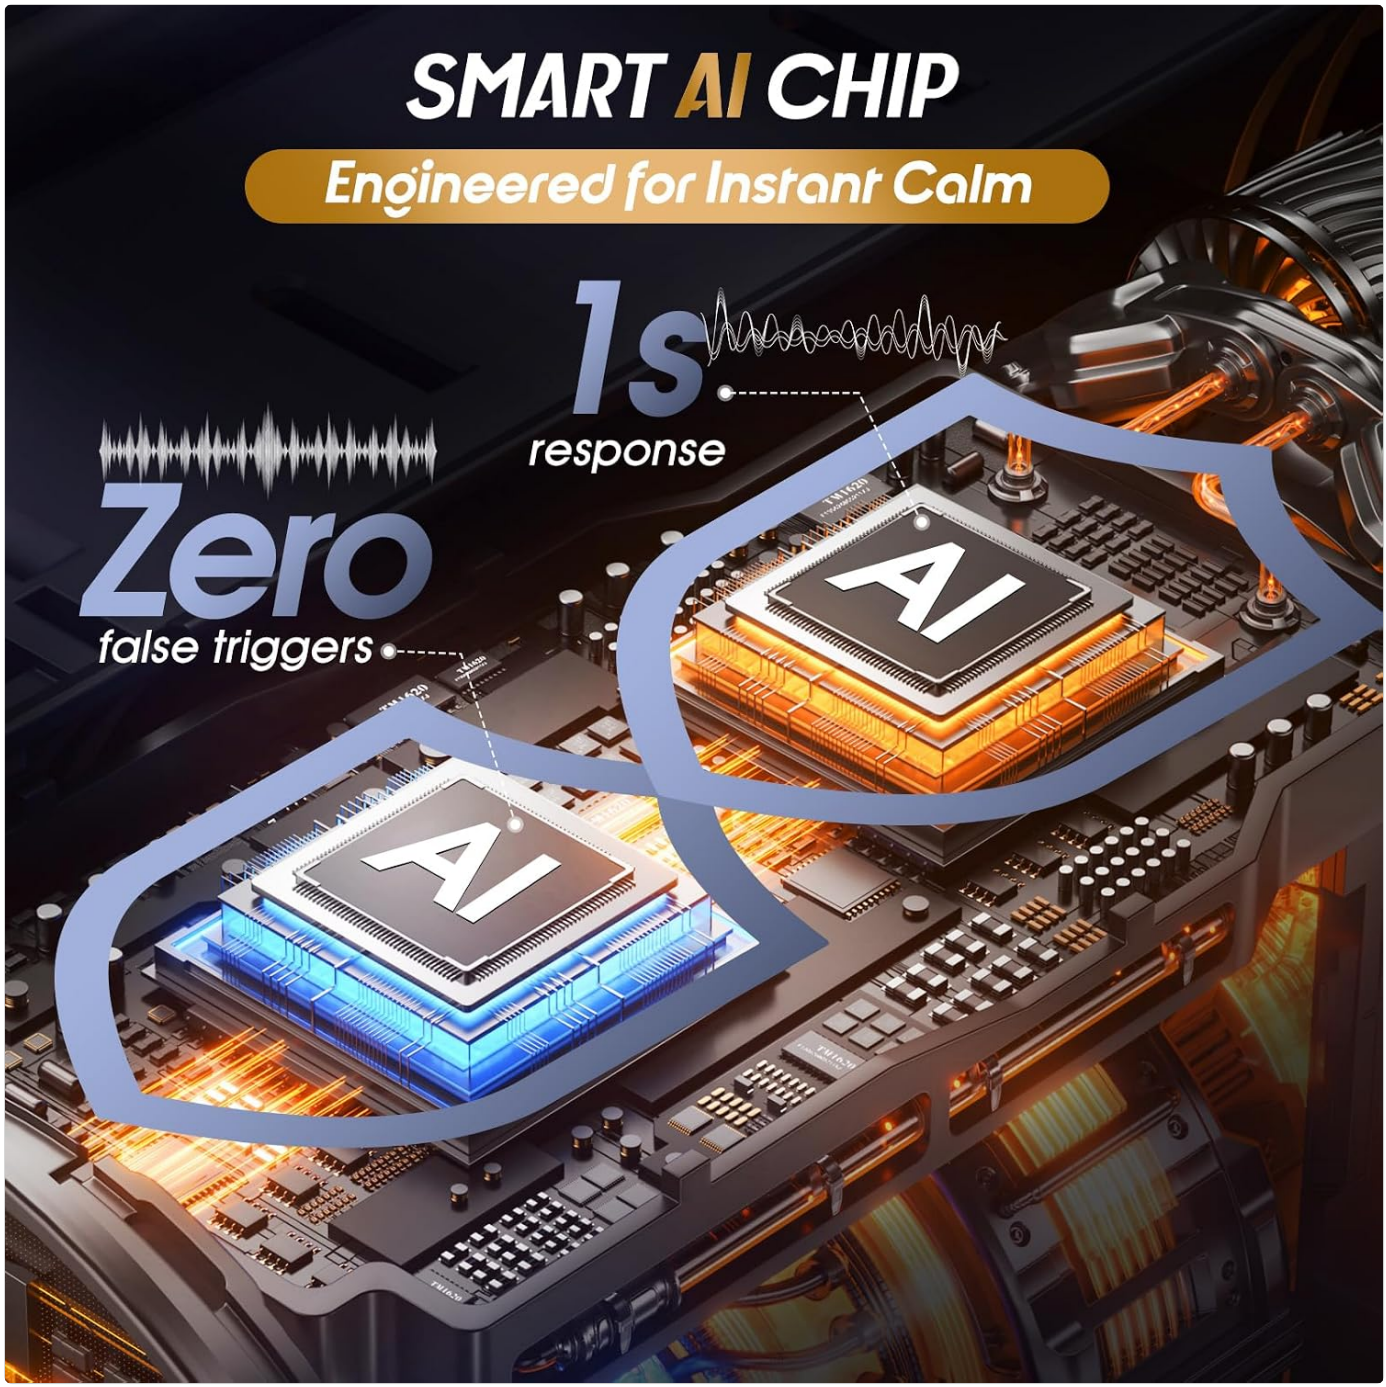

- **Beep Mode (Levels 1-5):** Emits an audible tone when barking is detected.

- **Vibration Mode (Levels 1-5):** Delivers a gentle vibration when barking is detected.
- **Beep + Vibration Mode (Levels 1-5):** Combines an audible tone with vibration.
- **Beep + Vibration + Static Mode (Levels 1-9):** Combines tone, vibration, and a static correction. This mode is for more stubborn barkers and should be used with caution, starting at the lowest level.

Levels 1-4 are generally suitable for smaller or more sensitive dogs, while levels 5-9 are for more confident or persistent barkers.

5.3 AI Sound Recognition

The collar features an intelligent AI chip that distinguishes your dog's unique barking patterns from other noises like wind, cars, or other dogs. This minimizes false triggers and ensures corrections are only applied when genuinely needed, promoting safe and consistent training.

The Smart AI Chip ensures accurate bark detection and a rapid response, preventing false triggers.

6. Maintenance and Safety

6.1 Cleaning

Regularly clean the collar strap and the main unit with a damp cloth. Ensure the contact points are free from dirt or debris to maintain proper function. Do not immerse the entire device in water for extended periods, despite its water-resistant rating.

6.2 Skin Health

To prevent skin irritation, do not leave the collar on your dog for more than 12 hours a day. Regularly check your dog's neck for any signs of redness, sores, or discomfort. If irritation occurs, discontinue use and consult a veterinarian.

6.3 Auto-Sleep Mode

The collar features an auto-sleep mode to prevent overstimulation and conserve battery life. The device will enter sleep mode after a period of inactivity or excessive corrections.

6.4 Waterproof Design

With an IPX6 waterproof rating, the collar is designed to withstand rain, splashes, and outdoor adventures. However, it is not recommended for swimming or prolonged submersion.

7. Troubleshooting

Problem	Possible Cause	Solution
Collar not activating	Low battery; Incorrect fit; Sensitivity too low	Charge the collar; Adjust fit to ensure contact points touch skin; Increase sensitivity level.
False triggers	Sensitivity too high; External noises	Decrease sensitivity level; Ensure collar is snug to prevent movement.
No static correction	Static mode not selected; Contact points too short; Static level too low	Select Beep + Vibration + Static mode; Use longer contact points for long-haired dogs; Increase static level.
Skin irritation	Collar worn too long or too tight; Allergic reaction	Remove collar for at least 12 hours; Loosen fit; Consult veterinarian if irritation persists.

8. Specifications
