Troubleshooting

Problem	Possible Cause	Solution
Bed frame is wobbly or noisy.	Loose hardware; uneven assembly; missing anti-noise strips.	Tighten all screws and bolts. Ensure all parts are correctly aligned as per the manual. Verify anti-noise sponge strips are in place.
LED lights are not working.	Power connection issue; remote/app not paired; damaged LED strip.	Check if the power adapter is securely plugged into an outlet and the LED controller. Ensure the remote or app is correctly paired. Inspect LED strips for visible damage.
Charging station is not providing power.	Bed frame power cord not plugged in; faulty outlet; device issue.	Verify the bed frame's main power cord is securely plugged into a functional wall outlet. Test the wall outlet with another device. Try a different device to rule out device-specific issues.
Floating effect appears incorrect.	Incorrect placement of hidden legs; uneven floor.	Ensure the hidden support legs are correctly positioned as per the assembly instructions. Place the bed frame on a level surface.
