RF Exposure Letter

According to 47498 D01 General RF Exposure Guidance v06 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by: (max. power of channel, including tone + up tolerance, mW) (min. test separation distance, mm) $\leq 1.195942 \leq 3.0$ for 1-g SAR and ≤ 7.5 for 10-g SAR, where 195942 is the RF channel transmit frequency in GHz. Power and distance are rounded to the nearest mW and mm before calculation. The result is rounded to one decimal place for comparison. $1.195942 \times 2.775 \text{ (mW)} \leq 2.403842$. So 2.403842 mW is the result. Then SAR evaluation is not required.
