Troubleshooting

Problem	Possible Cause	Solution
Shelf is wobbly or unstable.	Clamps are not tightened sufficiently or not properly aligned.	Ensure clamps are fully tightened against the bed rail. Verify the bed rail thickness is within the 3.5-inch clamp extension range.
Top tray does not rotate smoothly or adjust height.	Locking mechanism is too tight or too loose; obstruction.	Loosen the height adjustment knob before attempting to adjust. Check for any debris or obstructions in the rotating mechanism.
Shelf leaves marks on bed frame.	Direct contact between metal clamps and bed frame.	Place a protective barrier (e.g., felt pads, cardboard) between the clamps and the bed frame to prevent marks.
