## SETUP

Carefully unpack all components of your Alesis Nitro Ultimate kit. The kit includes a sturdy, reinforced 4-post rack, mesh drum pads (snare, toms, kick), dual-zone cymbals (ride, crashes), and a stand-mounted hi-hat controller. Follow the assembly instructions provided in the Quickstart Guide included in your packaging to correctly set up the drum rack and mount all pads and cymbals.

- **Mesh Pads:** The ultra-quiet Alesis mesh heads provide a responsive playing surface. Ensure they are securely mounted to the rack.
- **Cymbals:** The 10-inch dual-zone cymbals (ride and crashes) feature choke functionality. Position them for comfortable reach.
- **Hi-Hat:** The stand-mounted hi-hat controller allows for expressive playing. Note that a traditional hi-hat stand is sold separately and is required for full functionality.
- **Kick Drum:** The mesh kick drum tower should be placed on a stable surface, and the included kick pedal attached.

- **Cabling:** Use the provided DB25-pin connector snake cable to connect the pads and cymbals to the Nitro Ultimate Drum Module. Ensure all connections are secure.

## TROUBLESHOOTING

If you encounter issues with your Alesis Nitro Ultimate, refer to the following common troubleshooting tips:

- **No Sound:** Ensure the power adapter is securely connected and the module is turned on. Check all cable connections from the pads/cymbals to the module. Verify that headphones or speakers are properly connected and their volume is adjusted.
- **Pad/Cymbal Not Responding:** Check the cable connection for the specific pad or cymbal. If the issue persists, try unplugging and re-plugging the cable into the module. Ensure the pad/cymbal is not damaged.
- **Hi-Hat Issues:** If the hi-hat is not responding correctly or spinning on its stand, ensure all clamps are tightened sufficiently. If using a separate hi-hat stand, confirm it is compatible and properly assembled.
- **Bluetooth Connection Problems:** Ensure the drum module's Bluetooth is enabled and your device is in pairing mode. Try restarting both the module and your device.
- **Unwanted Movement:** If pads or cymbals move during play, ensure all clamps and wing nuts on the rack are securely tightened.
