1. **Prepare the Opening:** Ensure the gate opening is appropriately sized for the 6ft x 4ft gate. If installing with existing fence posts, verify their stability and alignment.
2. **Attach Hinges to Gate:** Secure the provided hinges to the designated points on the gate panel using the included hardware. Ensure they are firmly attached.
3. **Mount Gate to Posts:** Carefully position the gate within the opening. Attach the hinges to your fence posts (not included) or a suitable mounting surface. Use a level to ensure the gate is plumb and level before tightening all fasteners.
4. **Install Lockable Knob:** Follow the specific instructions provided with the lockable knob mechanism to install it onto the gate. Ensure the latch aligns correctly with the strike plate on the receiving post.
5. **Test Operation:** Open and close the gate several times to ensure smooth movement. Test the lockable knob to confirm it engages and disengages properly. Adjust hinges or strike plate as needed for optimal function.

- **Rust Resistance:** The gate is made entirely of rust-resistant aluminum with a special surface coating to prevent oxidation, maintaining its appearance for over 5 years. No special rust prevention treatments are typically required.
- **Scratch Resistance:** The material is designed to be three times harder than regular wood, offering resistance to pet scratches, gardening tools, and daily wear.

- **Hinge and Lock Check:** Periodically inspect hinges and the lock mechanism for any signs of wear or loosening. Tighten screws if necessary to ensure smooth operation and security.
