- **Metal Frame:** Wipe the powder-coated metal frame with a soft, dry cloth to remove dust. Avoid abrasive cleaners that could damage the finish.

7. TROUBLESHOOTING

If you encounter any issues with your bed frame, please refer to the following common solutions:

- **Squeaking Noises:** The bed frame incorporates EVA underlay on the middle beam to reduce friction. If squeaking occurs, re-check all connections and ensure they are tightened. Verify that the EVA underlay is correctly positioned.
- **LED Lights Not Working:** Check the power connection to the wall outlet and ensure the master switch on the headboard's charging station is on. Verify the remote control batteries.
- **Charging Ports Not Functioning:** Ensure the bed frame is plugged into a live wall outlet and the master switch on the headboard is activated. Test with different devices and cables.
- **Instability:** Re-examine all assembly points, especially the heavy-duty metal support slats and reinforced legs, to confirm they are correctly installed and tightened.
