TROUBLESHOOTING

- **Case Not Closing:**

Ensure the earbud covers are correctly installed and not misaligned. The covers are designed to be ultra-thin (0.2mm) to allow the case to close. If the case does not close, re-check the installation steps, especially ensuring the cover is not bunched up or improperly seated.

- **Sensors Not Working:**

Verify that the cutouts on the earbud covers are perfectly aligned with the sensors on your AirPods Pro 3. Any obstruction can interfere with functionality. Remove and re-install the covers, paying close attention to alignment.

- **Earbuds Slipping Out:**

While the covers are designed to enhance grip, ensure they are clean and free of oils or moisture that could reduce friction. If the issue persists, ensure you are using the correct size ear tips for your AirPods Pro 3 underneath the silicone covers.
