## 5. MAINTENANCE AND CLEANING

Regular cleaning and maintenance will prolong the life of your kettle and ensure optimal performance.

## Exterior Cleaning:

- Wipe the exterior surface with a soft, damp cloth. Do not use abrasive cleaners or scouring pads, as they may scratch the finish.
- Never immerse the kettle body or power base in water or any other liquid.

## Interior Cleaning and Descaling:

Mineral deposits (limescale) can build up inside the kettle, especially in hard water areas. Descale regularly to maintain efficiency.

- 3. Allow the solution to soak in the kettle for at least 30 minutes, or longer for heavy buildup.
- 4. Pour out the solution and rinse the interior thoroughly with fresh water several times.
- 5. Boil fresh water in the kettle and discard it to remove any residual vinegar taste.

## 6. TROUBLESHOOTING

If you encounter any issues with your electric kettle, please refer to the following common problems and solutions:

- **Kettle does not turn on:**
  - Ensure the power cord is securely plugged into a working electrical outlet.
  - Check that the kettle is correctly seated on its power base.
  - Verify the power switch is in the 'ON' position.
- **Water is not boiling:**
  - Confirm the power switch is engaged.
  - Check for power supply issues (e.g., tripped circuit breaker).
- **Kettle switches off too quickly or before boiling:**
  - This may indicate limescale buildup. Perform a descaling procedure as described in the 'Maintenance and Cleaning' section.
  - Ensure the lid is properly closed.
- **Water has an unusual taste:**
  - Perform the initial cleaning steps again (boil and discard water several times).
  - Descale the kettle if limescale is present.
