Ultimate Pleasure Pump BK69939 Instruction Manual

1. INTRODUCTION

This manual provides comprehensive instructions for the safe and effective use of your Ultimate Pleasure Pump BK69939. Please read all instructions carefully before first use and retain this manual for future reference. This device is designed to provide adjustable suction for personal use.

2. SAFETY INFORMATION

Your safety is paramount. Please observe the following precautions:

- For adult use only.
- Consult a healthcare professional before use if you have any medical conditions, circulatory issues, or concerns.
- Do not use on broken, irritated, swollen, or otherwise compromised skin.
- Discontinue use immediately if any discomfort, pain, bruising, or unusual sensations occur.
- Keep out of reach of children and pets.
- Clean the device thoroughly before and after each use as per the 'Cleaning and Maintenance' section.
- Do not over-pump or apply excessive pressure, as this may cause injury.

3. PRODUCT COMPONENTS

The Ultimate Pleasure Pump BK69939 typically includes the following components:

- **Pump Unit:** The main mechanism for creating and regulating suction.
- **Cylinder/Sleeve:** The transparent or semi-transparent tube where the body part is inserted.
- **Base:** Provides stability for the cylinder.
- **Quick-Release Valve:** A button or lever to instantly release suction.

4. SETUP

Before first use, follow these steps:

1. Carefully unpack all components from the packaging.
2. Inspect all parts for any signs of damage or defects. Do not use if damaged.
3. Clean the device thoroughly according to the 'Cleaning and Maintenance' section.
4. Ensure all parts are completely dry before assembly.
5. Attach the cylinder securely to the pump unit, ensuring a tight seal.

5. OPERATING INSTRUCTIONS

Follow these steps for safe and effective operation:

1. Apply a generous amount of water-based lubricant to the opening of the cylinder and to the area of the body intended for use. This ensures a comfortable seal and prevents friction.
2. Carefully insert the desired area into the cylinder, ensuring it is centered and comfortable.
3. Begin pumping slowly to create a vacuum. Observe the pressure and adjust the suction gradually to

a comfortable level. Do not exceed a comfortable pressure.

4. Maintain the desired suction for a short period, typically 10-15 minutes per session. Do not exceed this duration without consulting a healthcare professional.
5. To release suction, locate and press the quick-release valve. If your model does not have a quick-release valve, gently break the seal by pressing the skin around the cylinder opening to allow air to enter.
6. Remove the device carefully.

6. CLEANING AND MAINTENANCE

Proper cleaning and maintenance are essential for hygiene and product longevity:

1. After each use, disassemble the pump into its individual components.
2. Wash all components with warm water and a mild, toy-safe soap. Ensure all surfaces are thoroughly cleaned.
3. Rinse all parts thoroughly under running water to remove all soap residue.
4. Allow all parts to air dry completely before reassembly or storage. Do not use towels, as they may leave lint.
5. Store the device in a clean, dry, and discreet location, away from direct sunlight and extreme temperatures.
6. Do not use harsh chemicals, alcohol, petroleum-based cleaners, or abrasive materials, as these can damage the product.

7. TROUBLESHOOTING

If you encounter issues, refer to the following common problems and solutions:

- **No suction or weak suction:**

- Ensure all connections between the pump unit and cylinder are secure and airtight.
- Check the cylinder and pump unit for any cracks, damage, or blockages.
- Ensure a proper seal is formed with the skin. Apply more lubricant if necessary.

- **Discomfort or pain during use:**

- Immediately reduce the suction pressure.
- Ensure adequate lubrication is used.
- Discontinue use if pain or severe discomfort persists and consult a healthcare professional.

- **Difficulty releasing suction:**

- Locate and firmly press the quick-release valve.
- If no valve is present, gently press the skin around the cylinder opening to break the vacuum

seal and allow air to enter.
