- **No Lubrication Needed:** The DC motor is permanently lubricated and does not require additional oiling.

6. Troubleshooting

If you experience issues with your fan, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Fan does not start	No power to the fan; Loose wire connections; Remote control not paired or battery low.	Check circuit breaker; Ensure all wires are securely connected; Replace remote battery or re-pair remote.
Fan wobbles	Loose blade screws; Unbalanced blades; Loose mounting bracket.	Tighten all blade screws; Use a balancing kit (not included) to balance blades; Ensure mounting bracket is secure.
Remote control not working	Low or dead battery; Remote not paired with receiver; Obstruction between remote and receiver.	Replace battery; Re-pair remote with receiver (refer to remote manual); Ensure clear line of sight.
Fan is noisy	Loose screws; Motor housing rubbing; Blades hitting an obstruction.	Check and tighten all screws; Ensure no parts are rubbing; Verify blades have clear clearance.
