PACKAGE CONTENTS

Your package should contain the following item:

- 1 x Replacement Hose Handle (red)

SETUP AND INSTALLATION

Installing the replacement hose is a straightforward process that requires no special tools.

1. **Preparation:** Ensure your vacuum cleaner is unplugged from the power outlet before beginning installation.
2. **Remove Old Hose (if applicable):** Locate the connection points where the old hose attaches to the vacuum body and the handle. Typically, these connections involve a simple snap-in or twist-and-lock mechanism. Carefully detach the old hose.
3. **Attach New Hose to Vacuum Body:** Align the lower end of the new replacement hose with the corresponding port on the main body of your Shark vacuum. Push firmly until it clicks securely into place.
4. **Attach New Hose to Handle:** Align the upper end of the new replacement hose (with the red handle) with the connection point on your vacuum's wand or handle. Push firmly until it clicks securely into place.
5. **Verify Connection:** Gently pull on both ends of the hose to ensure it is firmly attached and will not detach during use.

OPERATING INSTRUCTIONS

Once the replacement hose is securely installed, your Shark Navigator Lift-Away Upright Vacuum can be operated as usual. The hose functions identically to the original part, allowing for flexible cleaning with attachments or in Lift-Away mode.

- Ensure all connections are secure before powering on the vacuum.
- Avoid kinking or excessively bending the hose during use to prevent damage and maintain optimal suction.

MAINTENANCE

Proper maintenance will extend the life of your replacement hose and ensure continued performance.

- **Regular Inspection:** Periodically check the hose for any signs of wear, tears, or blockages.
- **Cleaning:** The hose can be cleaned as needed. For general cleaning, wipe the exterior with a damp cloth. For deeper cleaning, the hose is machine washable. Ensure it is completely dry before reattaching to the vacuum.
- **Storage:** Store the vacuum and hose in a manner that avoids sharp bends or crushing, which could damage the hose material.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Hose does not fit or is loose.	Incorrect model compatibility or improper installation.	Double-check the compatibility list to ensure your vacuum model is supported. Ensure the hose is pushed firmly into place until it clicks.
Loss of suction through the hose.	Hose blockage or improper connection.	Inspect the hose for any visible blockages and clear them. Verify that both ends of the hose are securely attached to the vacuum.
