Hskyhan HH0003

Hskyhan Alkaline Water Filter Replacement Cartridge User Manual

Model: HH0003

Introduction

Thank you for choosing the Hskyhan Alkaline Water Filter Replacement Cartridge. This 7-stage filtration system is designed to purify your tap water, enhance its pH level, and remove various contaminants, providing you with clean, healthy, and great-tasting water. Please read this manual carefully before use to ensure optimal performance and longevity of your filter.

Setup and First Use

1. **Prepare the Filter:** Before first use, wash your hands thoroughly. Rinse the new filter cartridge under cold running water for approximately 1 minute.
2. **Soak the Filter:** Place the rinsed filter into a bowl of water and gently shake it for about 1 minute. This helps to prime the filter and ensures smooth water flow.
3. **Install the Filter:** Insert the prepared filter cartridge firmly into the designated slot within your Hskyhan water pitcher. Ensure it is seated correctly to prevent leaks.
4. **Initial Filtration:** Fill the pitcher with tap water. The first two pitchers of filtered water may contain carbon dust; it is recommended to use this water for plants or discard it. Do not consume the first two filtered batches.
5. **Ready for Use:** From the third pitcher onwards, your water is ready for consumption.

Operating the Filter System

The Hskyhan filter utilizes a 7-stage filtration system to transform ordinary tap water into weak alkaline, purified water. This process involves multiple layers of filtration materials, including natural coconut shell activity, ion exchange resin, and PP meltblown fiber, which are SGS certified.

Filtration Benefits:

- **pH Enhancement:** Depending on your source water, the filter typically increases pH by 0.5 to 2 or more, resulting in filtered water with a pH between 7 and 10.
- **Contaminant Removal:** Effectively filters out fluoride, chlorine, lead, dirt, harmful metals, and other undesirable substances.
- **Odor Improvement:** Removes unpleasant odors, providing a cleaner and healthier drinking experience.
- **Versatile Use:** Ideal for drinking, cooking, making coffee, tea, and juice, ice cubes, and for pets.

Maintenance

Regular maintenance ensures the continued effectiveness of your Hskyhan water filter.

Filter Replacement:

- The filter should be replaced approximately every 40 gallons or about every 1 month, whichever comes first.
- The pitcher lid may include a timer to help you track when a replacement is due.
- Always follow the initial setup instructions (rinse and soak) when installing a new filter.

Troubleshooting

- **Slow Filtration:** If water is filtering slowly, remove the filter and re-soak it in cold water for 1-2 minutes, gently shaking it. This can help dislodge any trapped air or carbon particles. Ensure the filter is correctly seated in the pitcher.
- **Water Temperature:** Do not use hot water with the filter. Water temperatures above 100.4°F (38°C) can affect the filter's performance and lifespan. Always use cold or room temperature water.
- **Taste/Odor Issues:** If you notice a change in taste or odor before the recommended replacement time, it may indicate that the filter needs to be replaced sooner due to high water usage or particularly hard/contaminated source water.
