### Connection Issues

- **Adapter Not Detected:** Ensure the adapter is fully inserted into a functional USB port. Try a different USB port.
- **Device Not Pairing:** Make sure your Bluetooth device is in pairing mode and within range. Check if other Bluetooth devices are interfering.
- **Intermittent Connection:** Reduce the distance between the adapter and the connected device. Ensure there are no major obstructions (e.g., thick walls, metal objects) between them.
- **Driver Issues (Windows 7):** If you are using Windows 7 and experiencing issues, verify that the correct drivers have been installed from the manufacturer's website.

### Performance Issues

- **Reduced Range:** For maximum range, both the adapter and the connected device should support Bluetooth 6.0. Older Bluetooth versions may result in shorter communication distances.
