Troubleshooting

This section addresses common issues you might encounter with your toilet. For problems not listed here, please contact customer support.

Common Issues and Solutions

- **Weak Flush:**
  - Check water level in the tank. It should be at the fill line.
  - Ensure the flapper chain has the correct amount of slack. Too much slack can prevent a full flush.
  - Inspect the rim jets under the bowl rim for clogs and clean if necessary.
- **Toilet Runs Continuously:**
  - Check the flapper for proper seating and wear. Replace if damaged.
  - Adjust the fill valve to ensure the water level is not too high, causing overflow into the overflow tube.
  - Ensure the flush handle is not sticking.
- **Leaking at Base:**
  - Tighten the tank-to-bowl bolts if the leak is between the tank and bowl.
  - If leaking from the base to the floor, the wax ring may need replacement. This typically requires removing the toilet.
- **Noisy Fill:**
  - Check the fill valve for debris or wear. Cleaning or replacing the fill valve may resolve the issue.
