4. INSTALLATION INSTRUCTIONS

1. Prepare the Refrigerator:

- Unplug the refrigerator from the electrical outlet.

- Remove any shelves or items that might obstruct access to the stud location.

2. Remove the Old Stud (if applicable):

- If replacing a broken stud, carefully pull out any remaining pieces of the old stud from the mounting hole. You may need pliers if it's stuck.
- Clean the mounting hole to ensure no debris interferes with the new stud's installation.

- Align the pointed end of the new shelf support stud with the desired mounting hole inside the refrigerator wall.
- Gently push the stud into the hole until it is fully seated and secure. Ensure the stud is firm and does not wobble.
- The metal pin on the stud should be fully inserted into the refrigerator wall, providing a stable anchor for the shelf.

4. Reinstall Shelves:

- Once all necessary studs are installed, carefully place the refrigerator shelves onto the newly installed support studs.
- Ensure shelves are level and stable before placing items on them.

5. Restore Power:

- Plug the refrigerator back into the electrical outlet.

5. OPERATION

The shelf support stud functions passively by providing a stable anchor for your refrigerator shelves. Once installed, simply place your shelves onto the studs. Ensure that the shelves are properly seated on all support studs to prevent tipping or instability. Distribute weight evenly on shelves to maximize stability and prevent stress on the support studs.

6. MAINTENANCE

- **Cleaning:** The shelf support stud can be cleaned with a damp cloth and mild detergent. Avoid abrasive cleaners that could damage the plastic.
- **Inspection:** Periodically inspect the studs for any signs of wear, cracks, or damage. Replace any damaged studs immediately to maintain shelf stability.
- **Secure Fit:** Ensure the studs remain firmly seated in their mounting holes. If a stud becomes loose, remove it, clean the hole, and reinsert it firmly.
