6. Troubleshooting

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose connections.	Check and tighten all bolts and screws. Ensure all components are properly seated.
Squeaking noises.	Loose connections, friction between parts, or uneven floor.	Tighten all hardware. Ensure the bed is on a level surface. The frame is equipped with noise-reducing padding on slats to minimize movement noise.
USB charging station not working.	Bed frame not plugged in, power outlet issue, or faulty cable/device.	Ensure the bed frame's power cord is securely plugged into a working wall outlet. Test the outlet with another device. Try a different USB cable or device.
Headboard difficult to adjust.	Securing bolts are too tight.	Loosen the securing bolts on the headboard support legs before attempting to adjust the height. Re-tighten firmly after adjustment.
