Contents

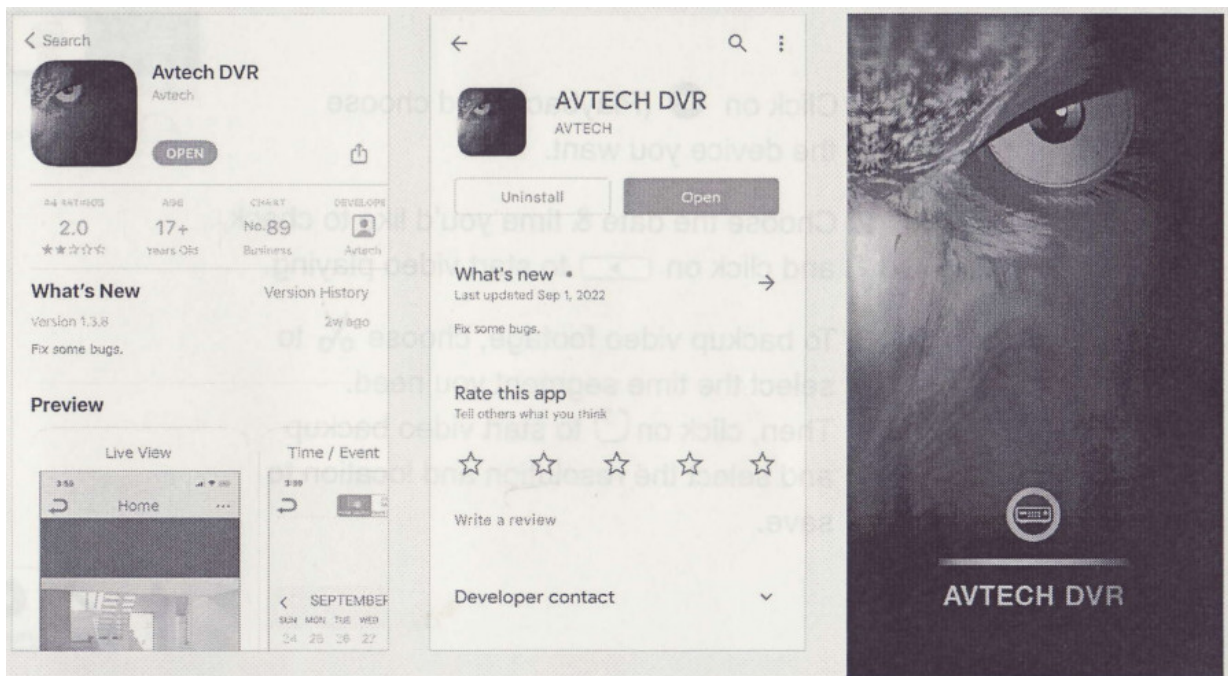

- 1 Download & Install
- 2 Add Device
- 3 Search & Backup Video Footage
- 4 Enable Push Video
- 5 Documents / Resources

Download & Install

1. Download and install the app, AVTECH DVR.

 ios	 Android
https://apps.apple.com/tw/app/avtech-dvr/id1490400846	https://play.google.com/store/apps/details?id=com.avtech.avtechdvr&hl=zh-TW

2. Click on the desktop icon  to open the app and agree the privacy policy to enter the main page.

Add Device

1. Click on  (Add) and choose QR Code to open the viewfinder.
2. On the DVR side, right click to show the main menu and choose QR CODE to show the QR code of UUID.
Place the QR code in the viewfinder and wait for the setting page to show with your recorder's address and port number automatically filled in.
3. Manually fill in the title, user name and password of your recorder. Choose Save to confirm and return to the main page.

Search & Backup Video Footage

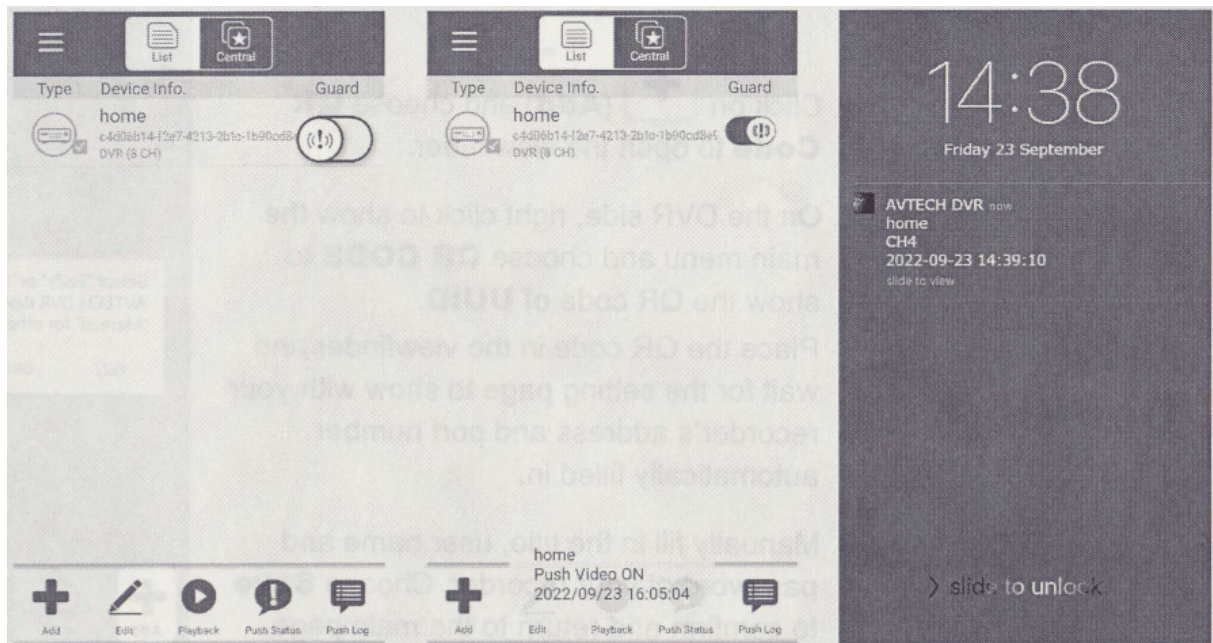

1. Click on  (Playback) and choose the device you want.
2. Choose the date & time you'd like to check, and click on  to start video playing.

- To backup video footage, choose  to select the time segment you need. Then, click on  to start video backup and select the resolution and location to save.

Enable Push Video

- Slide the Guard switch  to enable Push Video.
- The app will show the message that Push Video is enabled.
- You'll be notified when there's an alarm or motion event.
