The image stopped suddenly or mosaic	The signal is too weak	Strengthen the signal

Remark about the reception of HD channels: the reception of HD DVB-T channels requires a better signal than normal SD quality channels. For that reason, the TV should be positioned at places where the reception quality is higher. If the reception is not strong enough, the image of HD channels can be interrupted or of bad quality.

Important remarks for the reception of the TV channels:

- The base of the antenna is magnetic; for better reception of the TV signal, if available, put the base of the antenna on a metallic surface like the bodywork of a car, a fridge, or heating...
- The AXX-1028 can only receive nonencrypted free TV channels.
