Question About Hardware Compatibility

—

Q: Does ARMORX support wired connection?

A: Yes ARRMORX support wired connection. When you want to wired connect pleaseplug the wire into the USB port of the console directly and without the adapter.

—

Q: How long can I use the controller with ARMORX?

A:You can use it 10+ hours. And normally you can use it longer because the biggest factor of battery life is vibration.

—

Q: How to attach the ARMORX to the controller?

A: Attach by the battery compartment of the Xbox Series controller

—

Q: I can not attach the battery after attaching the ARMORX how can I power thecontroller?

A: You do not need a battery anymore! ARMORX has a 1300mAh rechargeable battery topower the controller.

—

Q: Is ARMORX wireless?

A: Yes, it is a wireless back button which has dedicated wireless 2.4G adapter.

—

Q: Which platforms can ARMORX make Xbox Series controller be compatible with?

A: PC (Windows 10&11), Xbox Seires X|S console, Xbox One console, Switch console

—

Q: Will ARMORX increase the latency

A: The latency of ARMORX is same as Xbox Series controller. 125hz report rate and 8mslatency. This is the highest report rate that Xbox Series controller support.

Question About Tactile Feedback

—

Q: Why the ARMOR-X has 4 back buttons instead of 2?

A: The back button is for better control. You can remap the button that disturbs your operation to the back button.E.g.

A: jump > M1
B: squat > M2

—

Q: Will the ARMOR-X influence my hand?

A:The ARMORX is designed to avoid the influence. You can hold the controller as usual and the back buttons are not easy to mis-touch. The ARMORX is designed to avoid the influence. You can hold the controller as usual andthe back buttons are not easy to mis-touch.

—

Q: Does the back buttons can be used when the top two-finger grip or top four-finger grip?

A: Yes, both of the grips can use the back button. But if you use the top four-finger gripyou can only use the back button by the ring finger.

—

Q: How do the back buttons of ARMOR-X feel?

A: ARMORX chose the keys which have Mecha-Tactile. It feels like the micro switches onthe gaming mouse.

—

Q: Does the ARMOR-X's button feel good? The switch should have tactile feedbackand the operating force should be just fine.

A: We used the 140cN operation force. The intensity is moderate and the tactile positionis very clear. Won't tire you and is not easy to mis-touch.

—

Q: Will the button sound be loud?

Q: After setting the TURBO function will it activate all buttons that have the samekey value?

—

—

Question About Profiles, Mapping, TURBO, MACRO

—

Q: After setting the TURBO function will it activate all buttons that have the samekey value?

A: No, it won't.

—

Q: Can I change the frequency of TURBO?

A: Yes, you can

—

Q: Is the key mapping a protocol key value or a physical key value?

A: Protocol key value.

—

Q: Only back buttons can be remapped?

A: Yes, You can only remap the back buttons when not using the APP.

—

Q: The original key has changed its value, and this key is mapped to the back button. Which value is sent by the back button?

A: The back button will sent the original key before changed.

—

Q: What is on-board profiles?

A: It is as same as the ELITE controller, you can set 3 independent sets of configuration. Include the data of joystick, trigger, motion control, key map, MACRO. ARMORX is a highly customizable product. You can use different settings for different games and usage scenarios. It has a profile switch button you can change the profile byjust clicking once. And you can customize the ARMORX Pro by APP. The APP can save unlimited profiles, Real-time modifications and be applied to ARMORX Pro.

Q: Which keys can be mapped to the back buttons?

  A: Basically, all buttons can be used except the power button and pairing button.

Q: Which keys can be set for the TURBO function?

  A: Basically, all action buttons and the back button can be set.
