BLACKVUE CM100GLTE 4G LTE Module

Product Information

The CM100GLTE is an LTE Connectivity Module designed for use with compatible BlackVue dashcams. It provides easy 4G LTE connectivity, enabling access to BlackVue Cloud features. The module is powered and connects via the USB port of your dashcam. With the Mobile Hotspot Function, the CM100GLTE can turn your dashcam into a mobile internet router, allowing up to five devices to connect simultaneously.

Key Features:

- 4G LTE Module compatible with Nano-SIM (SIM card not included)
- LTE Category 4 Speed: Up to 150Mbps (Download)/50Mbps (Upload)
- Complete support for BlackVue Cloud features
- Compact size (LxWxH): 90x60x10
- Micro USB 2.0 Type B Connector
- Enables Mobile Hotspot function

Compatibility:

When purchasing the CM100GLTE, ensure compatibility with your mobile carrier's network.

Product Usage Instructions

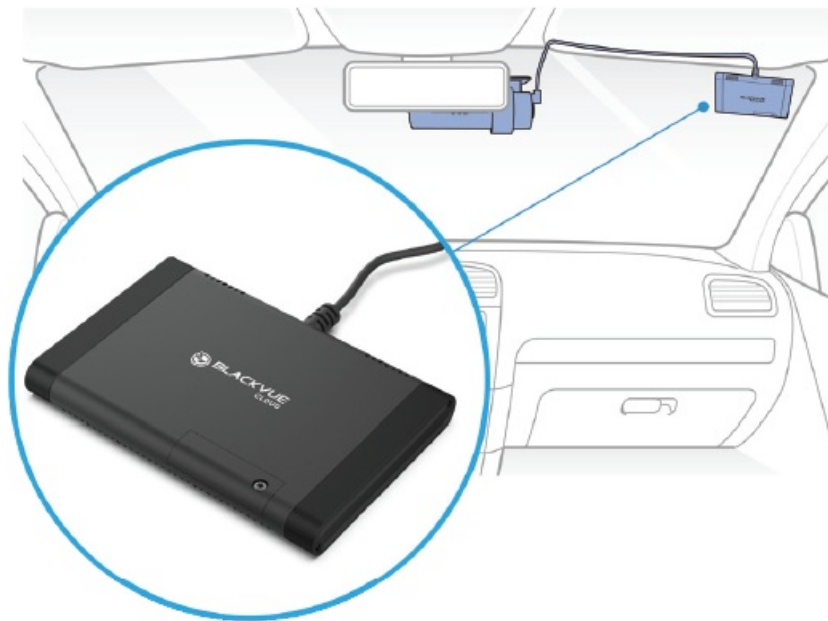

1. Insert a valid Nano SIM card into the CM100GLTE module.
2. Connect the CM100GLTE module to the USB port of your compatible BlackVue dashcam.
3. Power on your dashcam.

4. To use the Mobile Hotspot function, open the Wi-Fi menu on your device (laptop, portable game console, tablet, or mobile).
5. Select the BlackVue network from the available Wi-Fi networks.
6. Enter the dashcam's Wi-Fi password when prompted.
7. Your device is now connected to the BlackVue dashcam's internet via the CM100GLTE module.

Unlock BlackVue Cloud access. Share Wi-Fi in your car. LTE Connectivity Module

Note: Make sure to configure your BlackVue dashcam's settings to enable the Mobile Hotspot function before attempting to connect.

With Mobile Hotspot Function, your compatible BlackVue can now turn into a mobile internet router for up to five devices concurrently. This means you and your passengers can now use your BlackVue's internet on your laptop, portable game console, tablet or mobile. To connect to the BlackVue, simply open your device's Wi-Fi menu, select the BlackVue and enter the dashcam's Wi-Fi password.

The CM100GLTE provides easy 4G LTE connectivity to enable BlackVue Cloud features. All you need is a valid Nano SIM card.

The CM100GLTE is powered and connects via the USB port of your dashcam.

When connected to the CM100GLTE, your BlackVue can serve as a mobile hotspot providing wireless Internet access to up to five devices (smartphone, tablet, etc.).

Note: when purchasing, make sure the CM100GLTE you choose is compatible with your mobile carrier's network
