### Large Display

BlitzMax BW-V2 Mini Smart Projector has a large display that gave you feel like you are watching movies at cinema

### ANSI Lumens: 150

Improve your projector experience and give you more brightness

### Bluetooth

Bluetooth may be used to link the speaker and projector. To improve your experience, our projectors may be Bluetooth linked to speakers.

### KEY Correction Technology

± 40 ° Support manual side projection function with automatic up and down keystone correction

## FAQ's

### How can a projector's quality be determined?

A home theatre projector should have a resolution of 1920 x 1080, or Full HD & 4K UHD (3840X2160, referred to as true 4K). To be able to display HD movies or games, a good home theatre projector must have at least these pixel requirements.

### Does projector expire?

According to Projector Central, an online trade publication for projection equipment, projector bulbs typically last for around 2,000 hours. The bulb in an Epson PowerLite projector is said to last 5,000 hours, whereas an LED-based projector from Delta is supposed to last roughly 20,000 hours.

### What advantages can tiny projectors offer?

**Portability:** You don't need a larger TV or projector to create a huge video display. You can get the desired large, clear show at home or even outside with a tiny projector. Due to its incredibly compact size, you can carry it anywhere in your pocket.

### How come my projector won't connect?

The following are the most typical reasons for the "No Signal" notification: Incorrect connections between the source device and the projector. Make sure the adapters' and cables' plugs are tight. Ensure that the proper cable and/or adapter are being used to connect your source device to the projector.

### Can I use a projector with my phone?

After connecting your Android phone to the same local area network as your projector, choose "Screen Sharing." The projector instantly recognises the device and displays it on the same screen when you press the remote control button and choose "Allow." On the screen, you can see the contents of the phone.

### Can projectors operate continuously?

Regular, everyday television may be viewed on a projector.

### Casting to a projector capability

Because your projector has a built-in Chromecast, you can cast content from apps that support it. Connecting your device or computer will allow you to join the same wireless network as the projector. Open the Chromecast-compatible app, and then click the Cast button. Pick your projector from the choices shown.

### Why won't my projector recognise my USB?

One of three things, including a clogged USB port on your projector, might be the root of your connectivity issues. The device's or projector's USB port is broken or loose. The USB stick or cable is broken.

### **I want to use my projector to watch videos, but how?**

One of the most straightforward methods for wirelessly connecting your Android phone or tablet to a projector is by using a Chromecast streaming adapter.

### **How can my smartphone be connected to my projector?**

Your phone (Android or iPhone) can be connected to a projector using cables and adapters like USB-C to USB-C, HDMI to HDMI, MHL, and USB-C to VGA.

### **Do projectors turn off automatically?**

Projectors automatically turn off when there is no activity or after the allotted time has elapsed. The projector's bulbs could become damaged if they are used for an extended period of time.

### **Why does my projector constantly turn off?**

Lack of ventilation could cause heat and dust to accumulate, which would make the projector's fans work more difficultly.

### **Do projectors need maintenance?**

Your projector needs very little maintenance to keep performing at its best. You may occasionally need to clean the lens in addition to the air filter and air vents to prevent the projector from overheating as a result of blocked airflow.

### **Where do projectors get the most use?**

Video projectors have largely supplanted overhead, slide, and traditional film projectors in a variety of settings, including conference rooms, classrooms, home theatres, and movie theatres.

### **How long does the battery in a projector last?**

Projector batteries typically last 90 minutes to 2 12 hours on average. Therefore, using a backup is much better for you and the battery than letting it run out eventually.
