bomaker Magic 421 Max WiFi Projector

Important Safety Instructions

Thank you for purchasing Bomaker projector. Please read this manual thoroughly before using and keep it for future reference. If physical injury, loss of data, or damage is caused by failure to follow instructions, the warranty does not apply.

Setup

- Do not install the projector in places without proper ventilation.
- Do not install the projector in hot and humid places.
- · Do not install the projector in dusty or smokey places.
- Do not block the ventilation holes (intake or exhaust).
- Do not install the projector near the temperature and smoke detectors. It may cause a sensor failure.
- Do not install the projector in areas where the warm and cool air will blow directly onto the projector, otherwise, it may cause projector failure due to moisture condensation or large temperature changes.

Power Supply

- Power off the device before removing the power supply from the socket.
- Use the power cord with caution to avoid unduly bending it. Damaged power cords may cause electric shock or fire.
- Unplug this device if there are lightning storms or when unused for a long period of time.
- Never touch the power cable or the power connection with wet hands.
- Unplug the power cord from the outlet after using the projector.

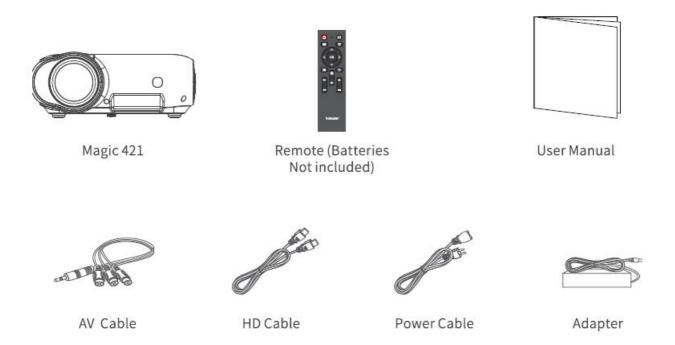

Repairs

- · Never make any repairs to the projector yourself.
- No components in the projector can be repaired by customers.
- Please entrust qualified professional maintenance personnel for repair.

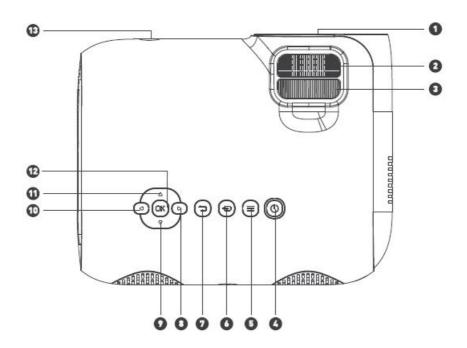

Caution

- Do not look at the lens, or it may cause severe eye injury.
- During and after use, the temperature near the outlet will rise. Therefore touching it may cause burns.

Getting Started

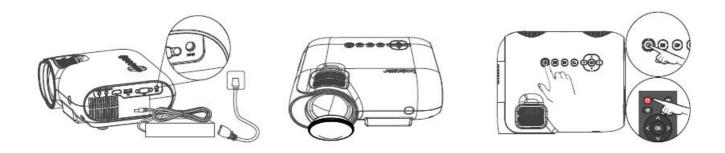

Projector Placement

Please leave at least a 30cm gap from walls to maintain adequate ventilation ensuring the projector's performance and reliability.

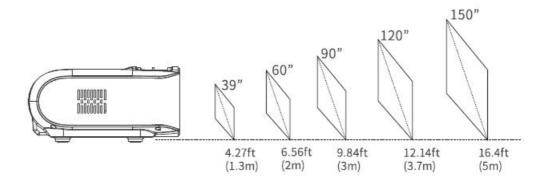

Start Using

Power On

- 1. Plug the power cord into an outlet.
- 2. Take off the lens
- 3. Press the power button to turn on the projector.

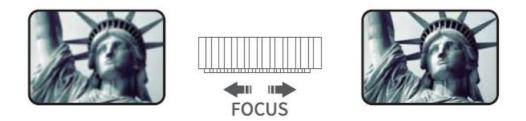

Projector Distance & Size

The recommended projection screen is around 80 inches with a projection distance of around 8.5 ft. Ambient darkness will improve the clarity of the projected images.

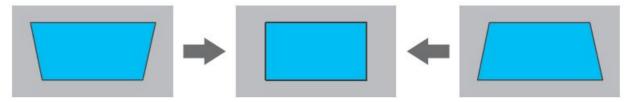

Adjusting the projected image

Please dial the focus knob slowly change the front and rear position of the lens and get a clear image.

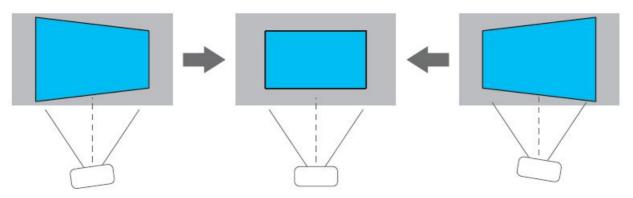

Keystone Correction

1. Adjust the keystone on the projector to adjust the images shape .

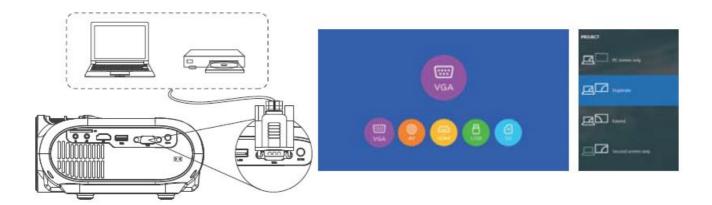

2. Adjust the placement of the projector. When the left side of the picture is wider, move the left side of the projector corresponding to the picture forward; when the right side of the picture is wider, move the right side of the projector corresponding to the picture forward.

Input Source VGA mode

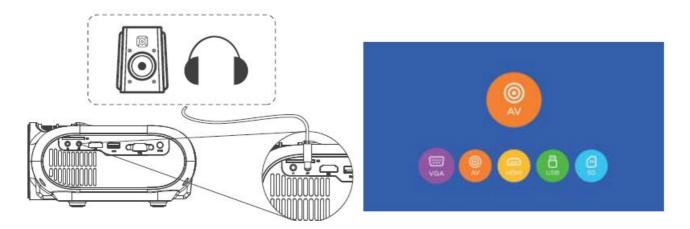

- 1. Step 1: Connect the projector and the device with a VGA cable.
- 2. Step 2: Press and hold the Source button -: ±1 of the projector or remote control to enter the input source interface.
- 3. Step 3: Select VGA and press OK to enter. If the interface is not displayed successfully, please proceed to the next step.
- 4. Step 4: Use the shortcut key II+P to enter the projection settings, select Duplicate to enter the interface. Step 5: Press the return key to exit and return to the main interface of the projector.

Note: When using the VGA mode, please change the resolution of the device connected to the projector to 1366*768 manually to get a better image effect

AVmode

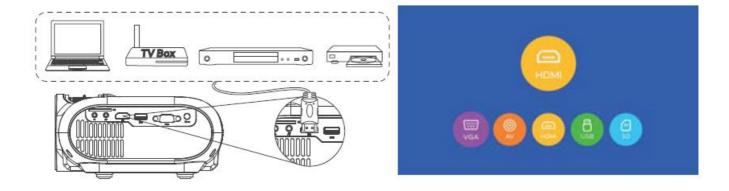

- 1. Step 1: Connect the projector and the device with the AV cable.
- 2. Step 2: Press and hold the Source button -: E of the projector or remote control to enter the input source interface.
- 3. Step 3: Select AV, press OK to enter, press return key to exit and return to the main interface of the projector.

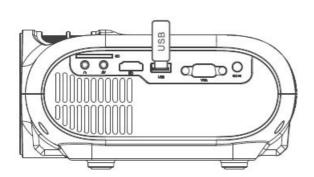

HDMI mode

- 1. Step 1: Connect the projector and the device with HDMI cable.
- 2. Step 2: Press and hold the Source button of the projector or remote control to enter the input source interface.
- 3. Step 3: Select HDMI, press OK to enter; press Return to exit and return to the main interface of the projector.

 Note: When using the HDMI mode, please manually change the resolution of the device connected to the projector to 1366*768 manually to get a better image effect

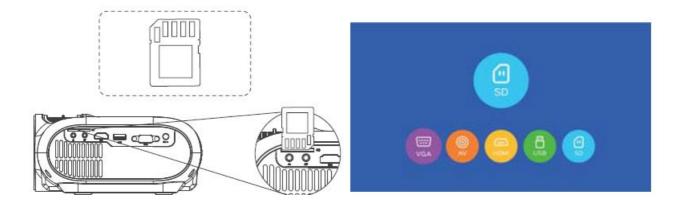

- 1. Step 1: Connect the projector to the USB.
- 2. Step 2: Press and hold the Source button -:±1 of the projector or remote control to enter the input source interface.
- 3. Step 3: Select USB and press OK to enter the module interface.
- 4. Step 4: Select the corresponding Movie, Music, and Picture modules of the file type, and press OK to enter the file interface.
- 5. Step 5: Select the file to be played in the file interface, and press OK to select play.
- 6. Step 6: Press the return key to exit and return to the main interface of the projector.

SDmode

- 1. Step 1: Connect the projector to the SD.
- 2. Step 2: Press and hold the Source button -: ±1 of the projector or remote control to enter the input source interface.
- 3. Step 3: Select SD and press OK to enter the module interface.
- 4. Step 4: Select the corresponding Movie, Music, and Picture modules of the file type, and press OK to enter the file interface.
- 5. Step 5: Select the file to be played in the file interface, and press OK to select play.
- 6. Step 6: Press the return key to exit and return to the main interface of the projector.

Trouble Shooting

QI. Blurry Image

- Make sure the projection distance is farther than the minimum projection distance of 1.2 m.
- · Adjust focus ring/keystone.

Q2. The content from Hulu, Netflix, and similar services cannot not be mirrored or cast?

Due to the copyright restriction from Hulu, Netflix, and similar services, the contents MAY NOT be mirroring.

Q3. What should I do if I want to watch the content from Hulu, Netflix, and similar services via the projector?

Please prepare a Fire TV stick, Roku stick or ChromecastTM(not included), then connect it to the projector to watch the content.

Q4. Remote Unresponsive

- Make sure remote points at IR receiver directly.
- · Do not cover IR receiver.
- Try a new pair of AAA batteries.

QS. The projector can't screen mirroring?

- Firstly, please kindly check whether the projector selects the Screen Mirroring input source and whether the device is connected to the projector WiFi.
- please make sure the device and projector connect to the same WiFi if the projector features WiFi function.
- Please unplug the power and re-apply it again If the Screen Mirroring input source is selected and the WiFi is connected while the projector still can't screen mirroring.
- Please reset the projector if it still can't work after unplugging the power.
- · please feel free to contact us .

Q6. Black spots appear on the projector image?

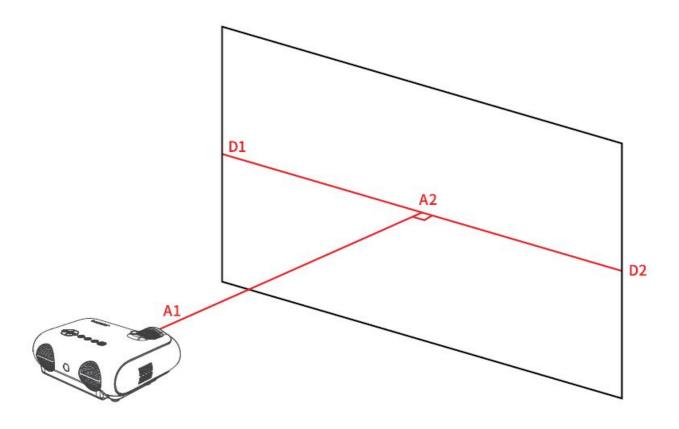

Open the Maintenance Window on the bottom of the projector.

Q7. Fail to connect the Bluetooth?

- · Please open the projector and device Bluetooth setting
- · please check if the device pair with the projector successfully.
- 1f the projector can't work if paired, please unplug the power and re-apply it again.

QB. How far between the projector and the wall to get a 100 inches image?

The projector throw ratio is 1.4, and the length of the 100-inch screen DID2 is 2214mm. The throw ratio = the distance from the projector to the wall AIA2/the projection screen length DID2 According to I.4=AIA2/2214, AIA2 is 3099 mm.

Q9. There is no signal on the projector?

- Please make sure all cables are connected to the projector correctly and stably.
- Please check whether the projector input source mode has been selected as the correct source.
- For example: if the device and the projector are connected with an HDMI cable, the HDMI input source must be selected for projection, otherwise there is no signal if other source are selected.
