**BRIGADE BL-2120C Front Camera Monitor System**

## Product Information BL-2120C Manual

The BL-2120C is a camera that allows you to adjust the angle of view according to your preferences. It comes with a sliding arm that enables you to move the lens up and down to find the desired viewing angle. The camera also has a screw mechanism that allows you to tighten or loosen the sliding arm, ensuring the camera stays in place once you find the desired angle.

## Product Usage Adjusting the Angle of View

Follow these steps to adjust the angle of view on your BL-2120C camera:

1. Using a Philips head screwdriver, remove the back case from the camera. This will reveal the sliding arm.
2. Loosen the sliding mechanism using the Philips head screwdriver.
3. Slide the lens up and down until you find the desired viewing angle.
4. Tighten the screw on the sliding mechanism to ensure that the camera stays in place.
5. Replace the cover and fixing screw on the back of the camera.

## INSTALLATION INSTRUCTIONS

1. Step 1 Remove the back case from the camera with a Philips head screwdriver to reveal the sliding arm.

2. Step 2 Loosen the sliding mechanism using the Philips head screwdriver.

3. Step 3 This will now allow the lens to slide up and down to find the desired viewing angle. Once the camera has been adjusted to the desired angle, tighten the screw on the sliding mechanism, then replace cover and fixing screw.
